front Door Designs

By Mary I.Y. Thomas

This book illustrates many great designs of front doors for residential houses. It is an ideal tool for people who want to custom build their dream homes, and it is also a fantastic catalog for designers, architects, and builders who need to show their clients what choices of front doors there are.

Doors in this book can be made of different materials, such as woods, metal, and glasses. Some of them have arched top to enhance their artistic look. These pictures are shot at the actual sites of the houses to give you the best understanding how the doors may look like after being installed in their real surroundings. This is much better than showing the pictures of only the doors by themselves before installation.

Thank you for viewing this book and enjoy the great journey.

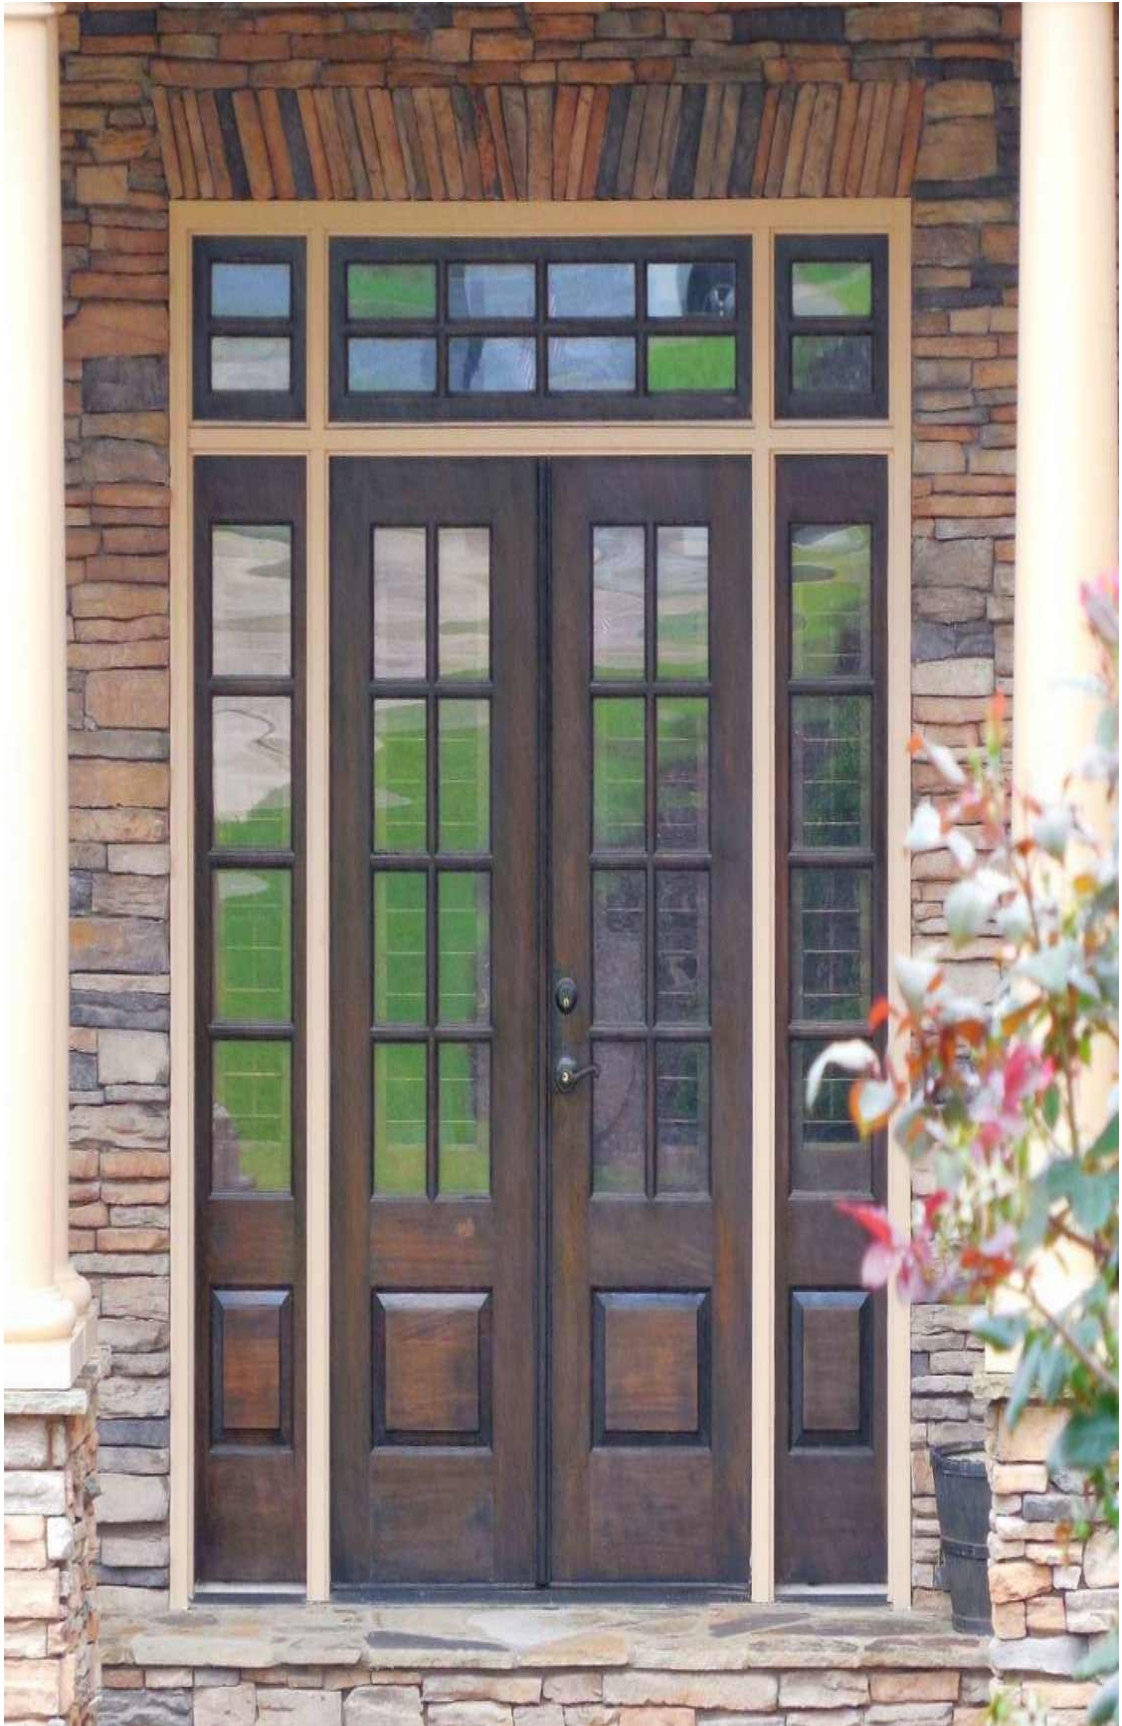

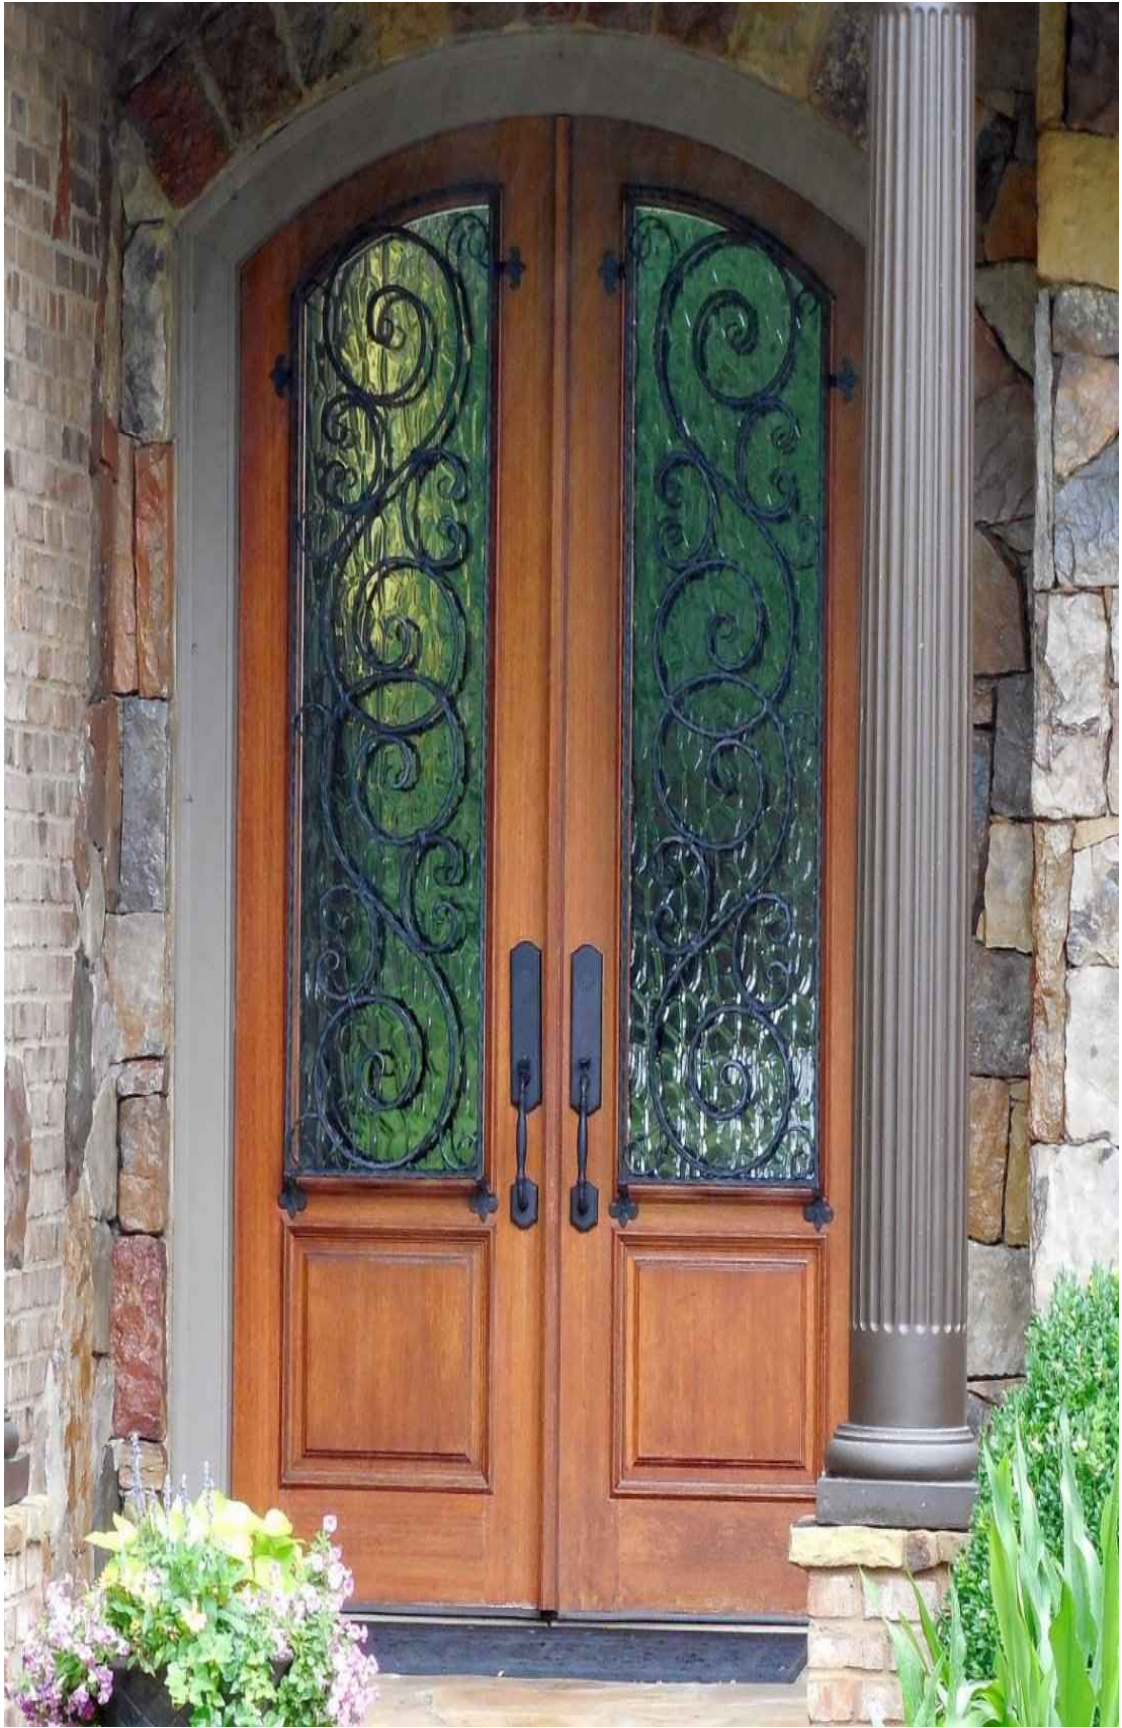

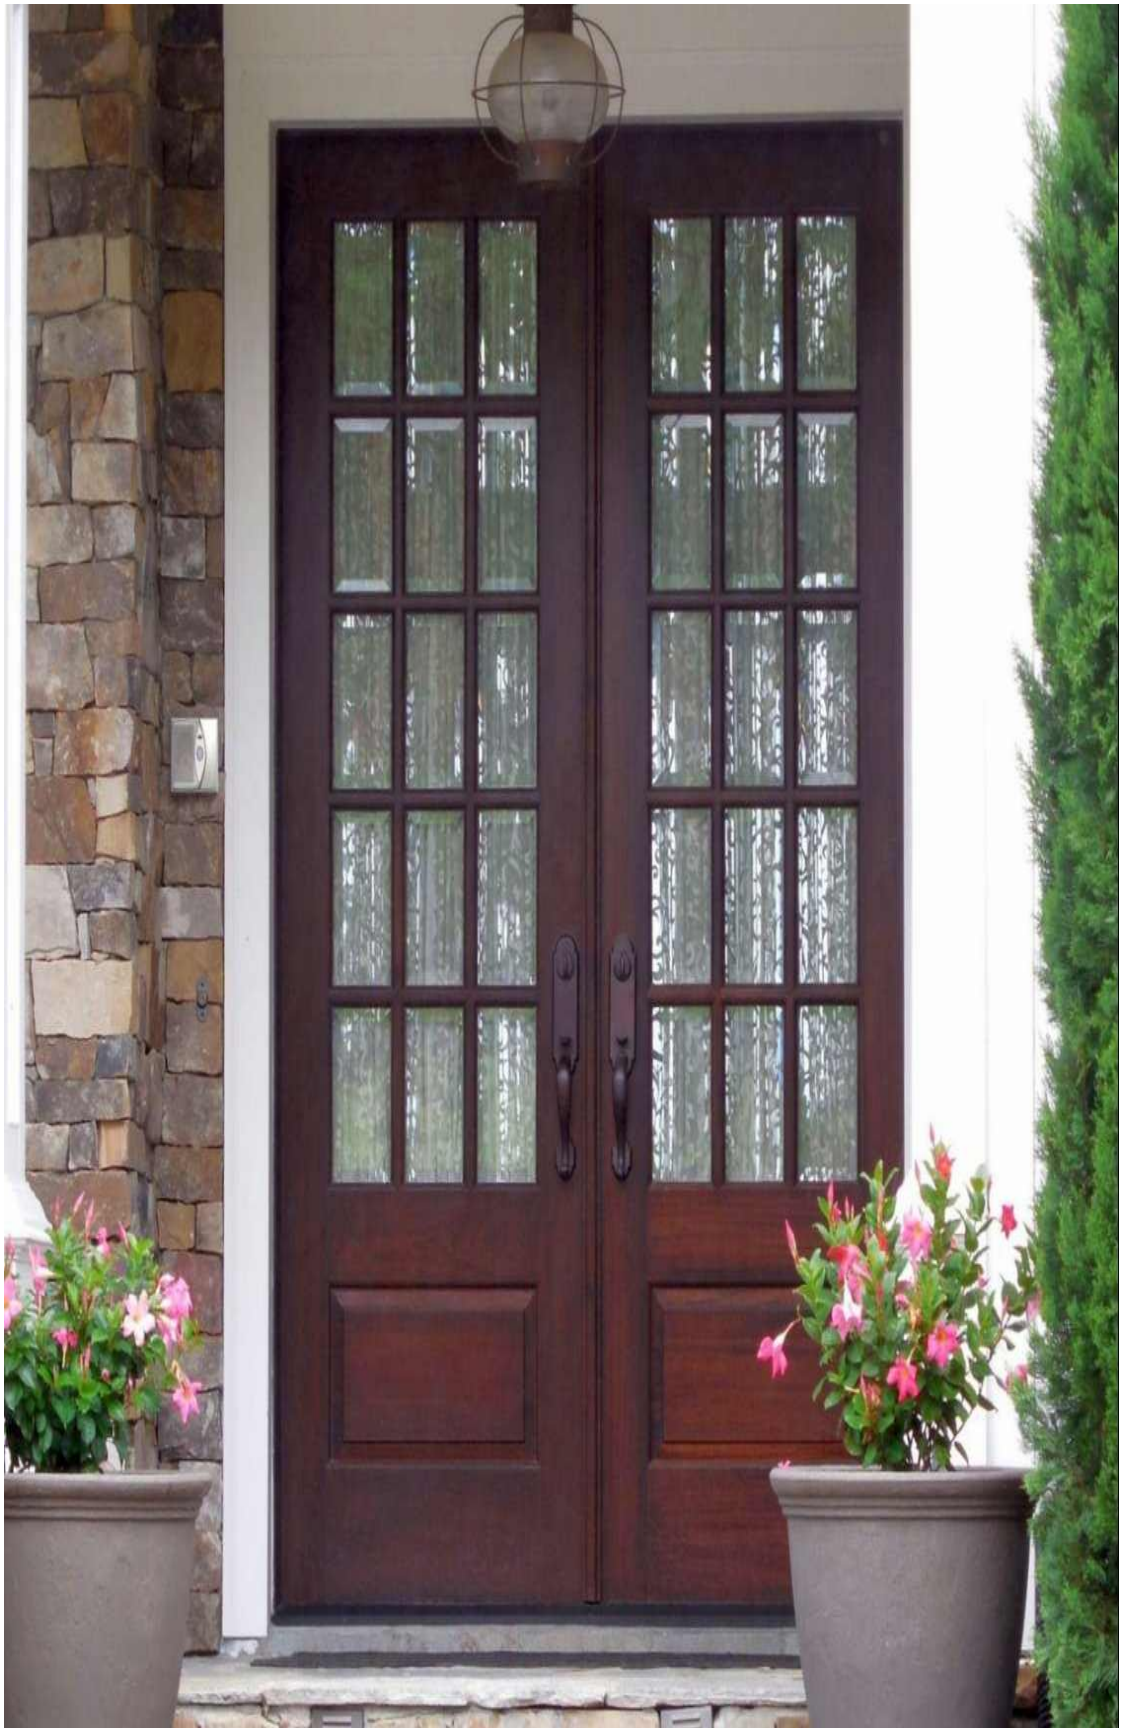

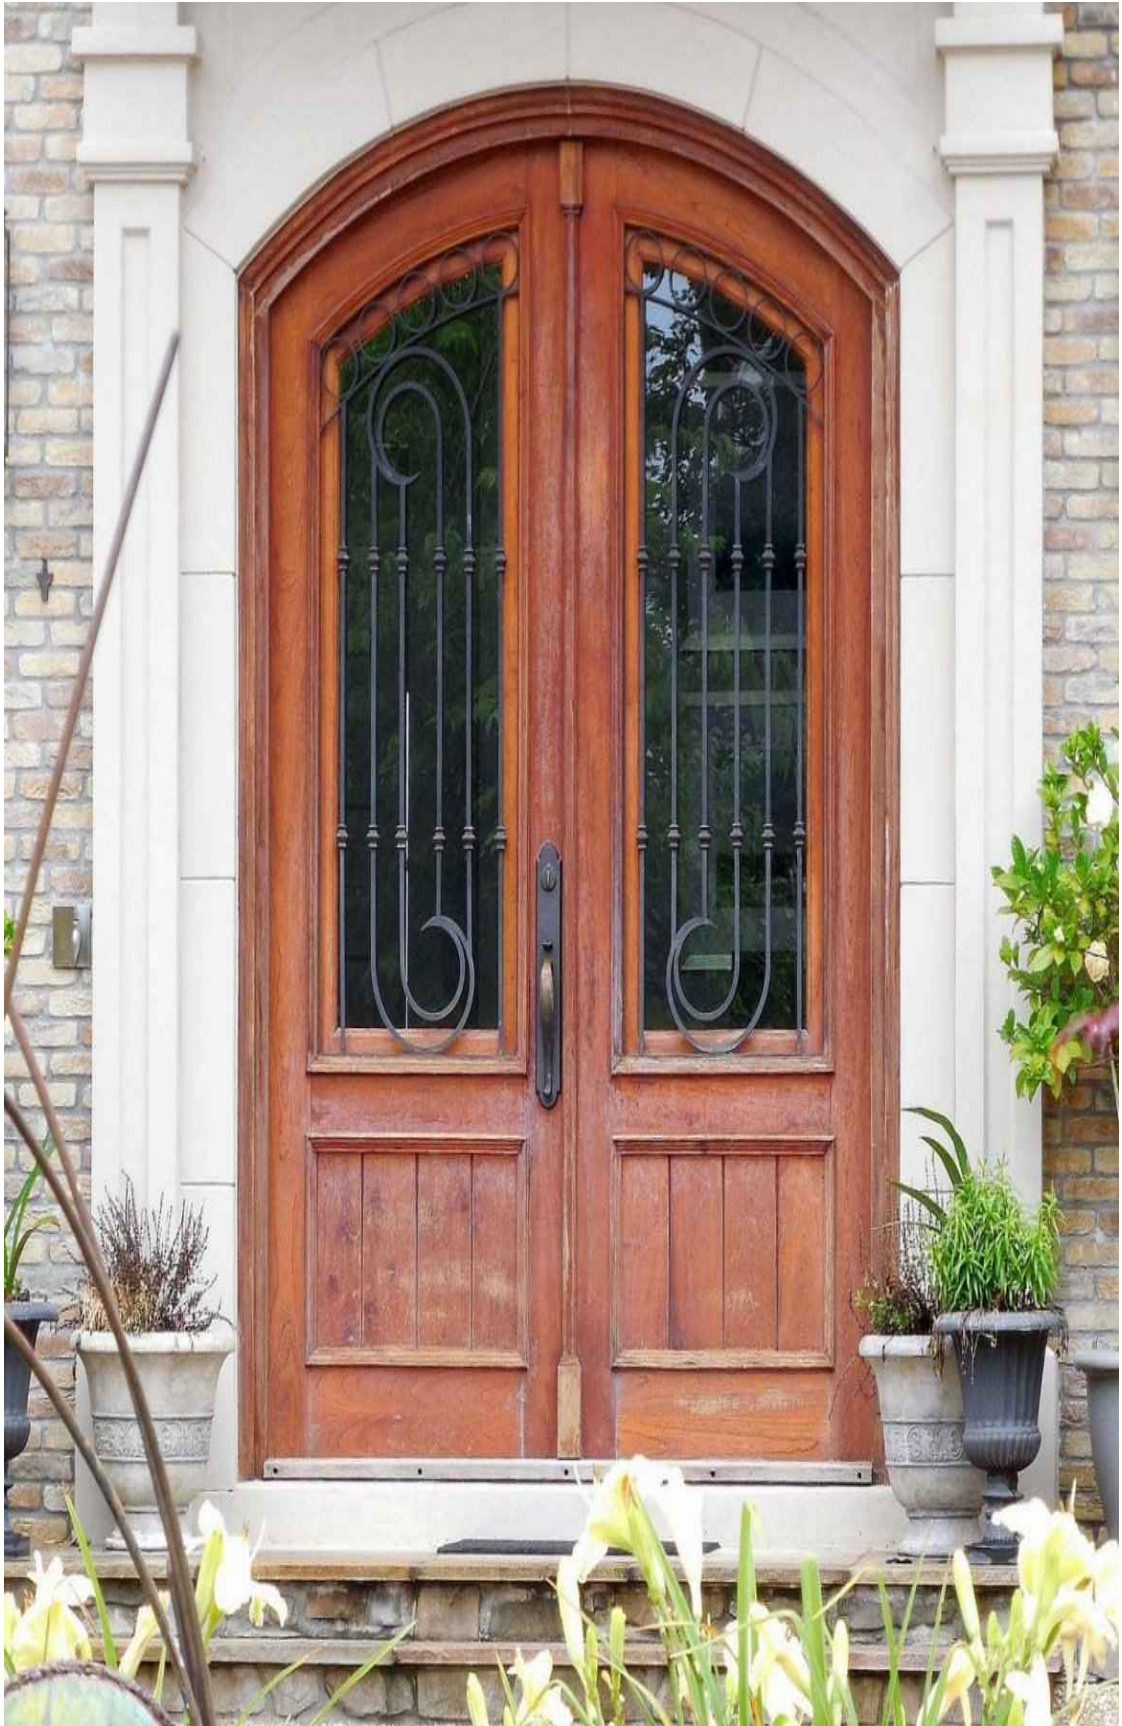

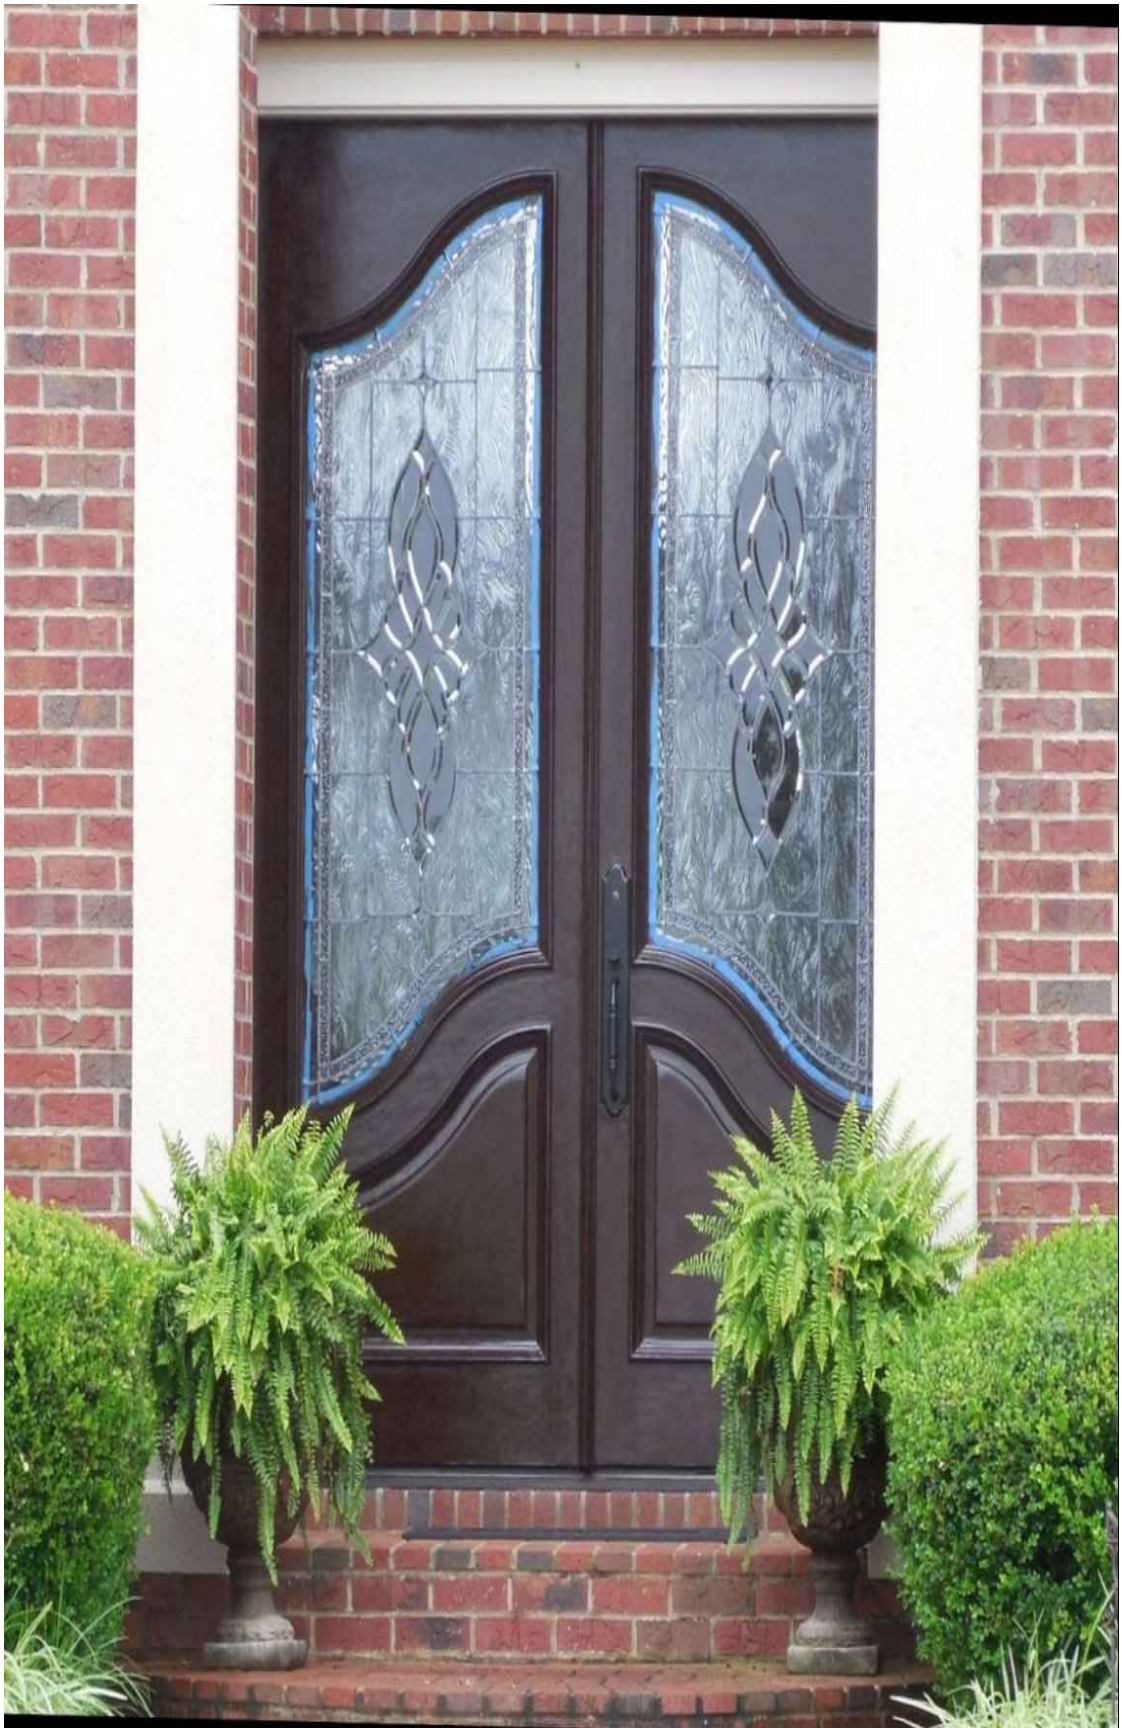

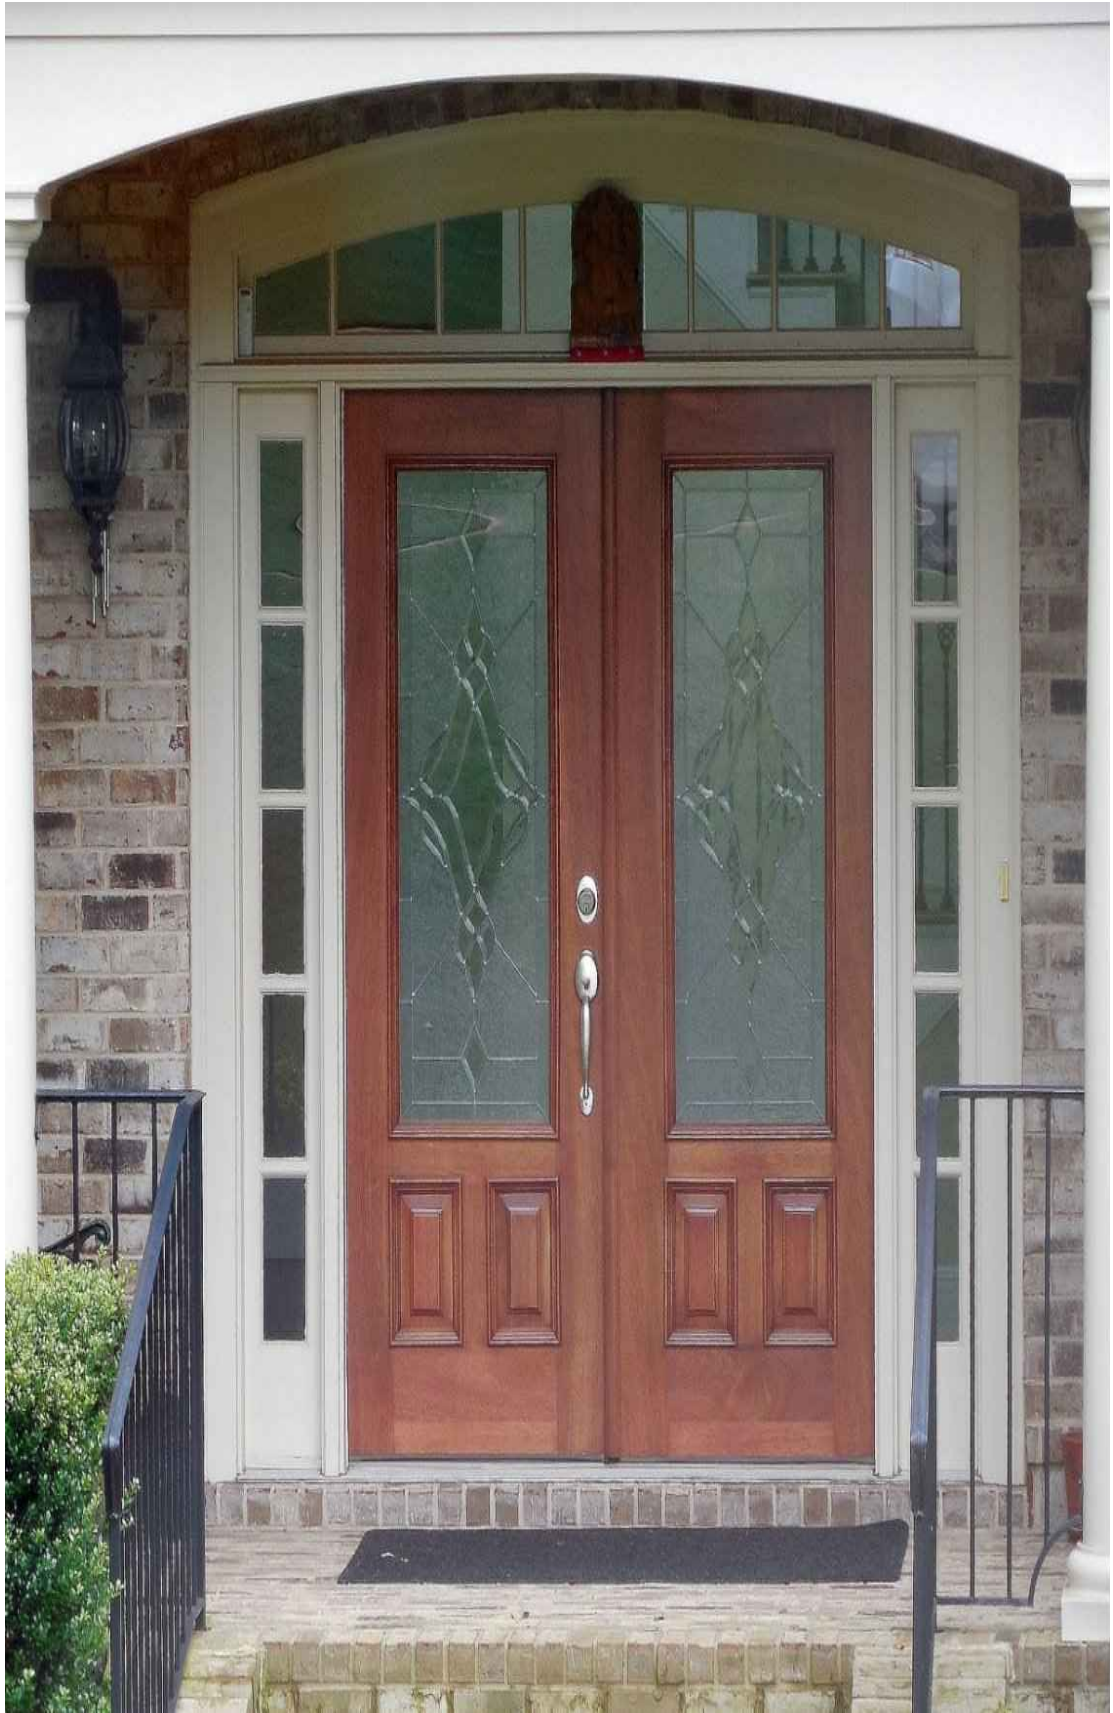

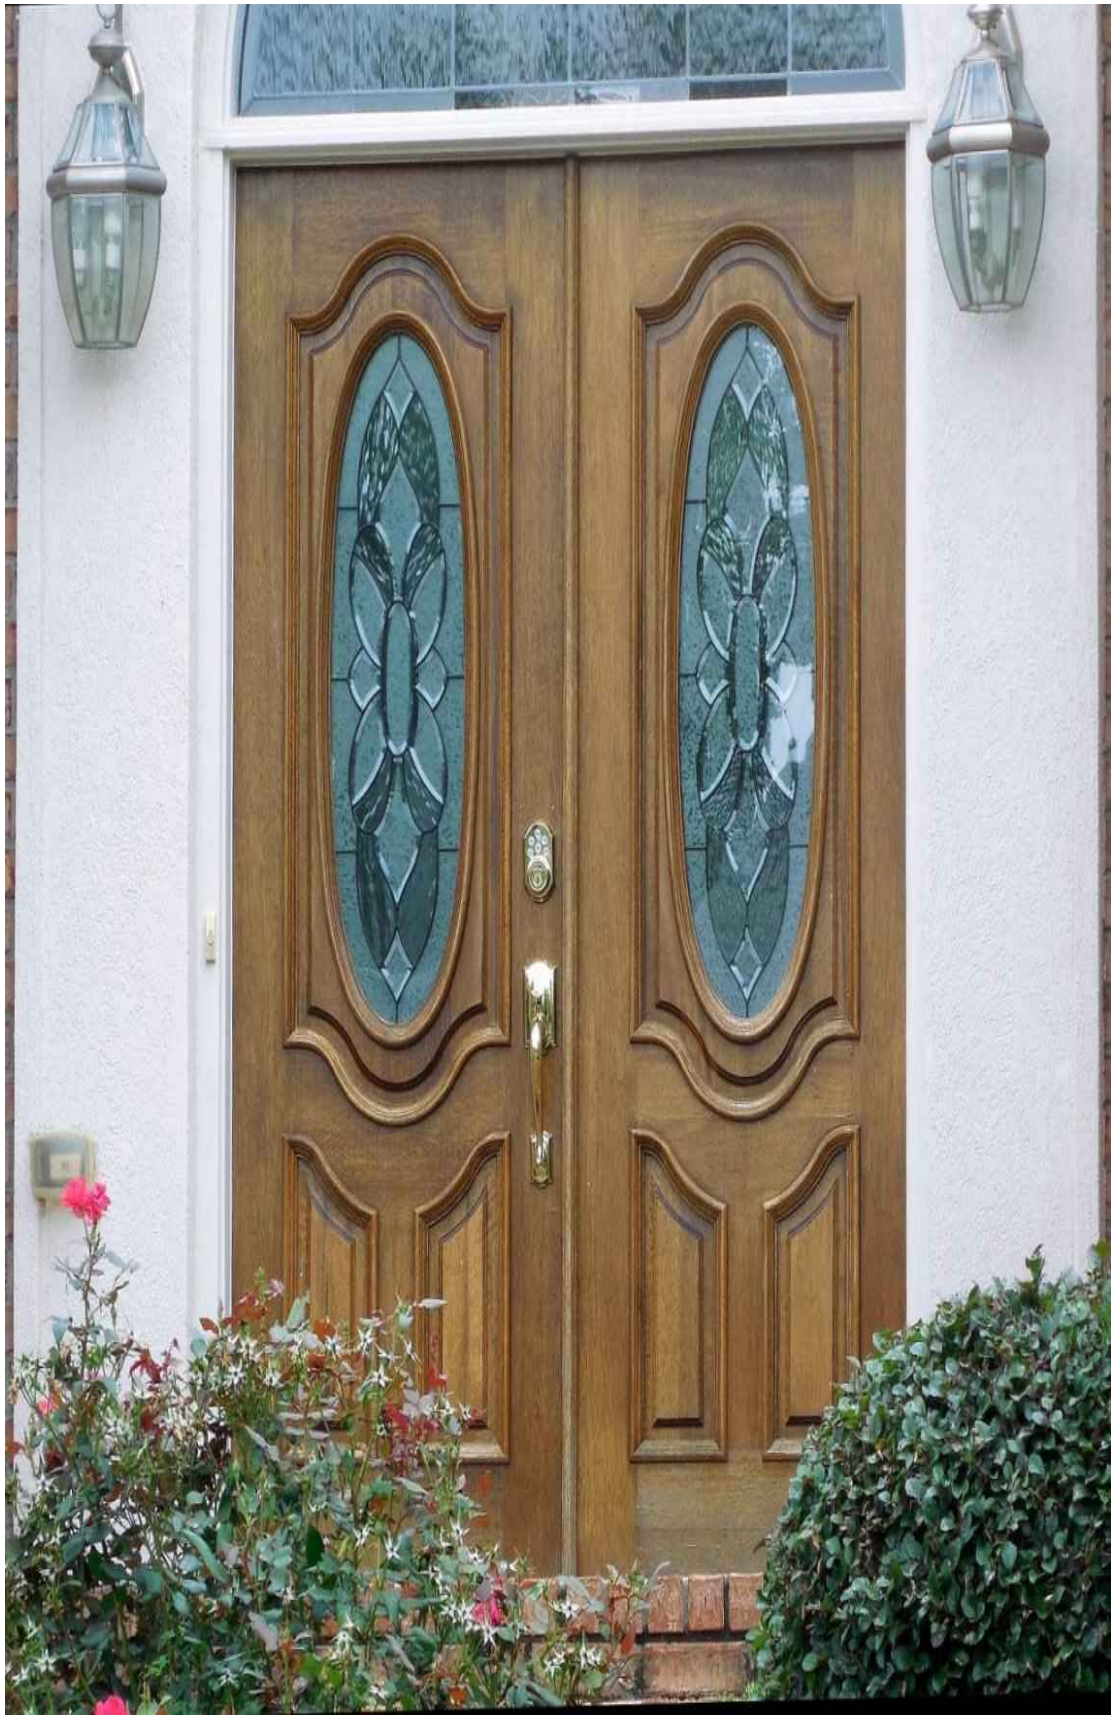

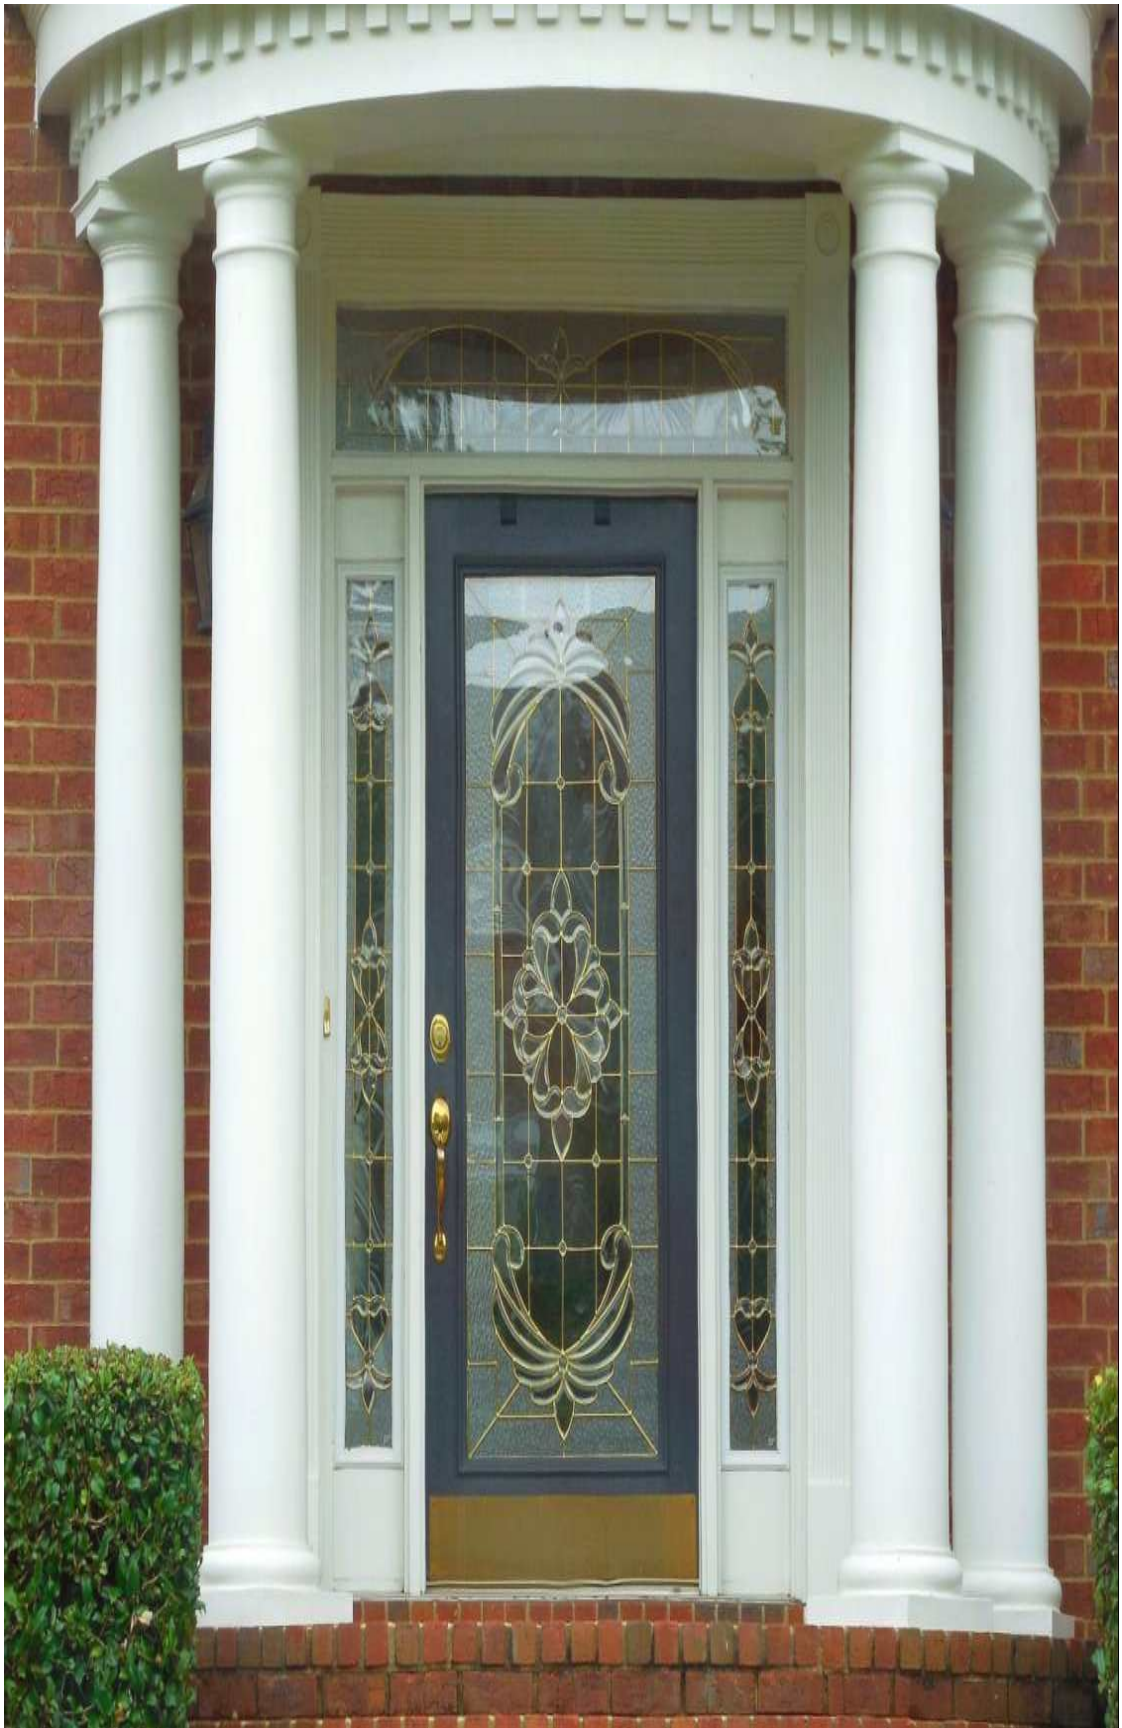

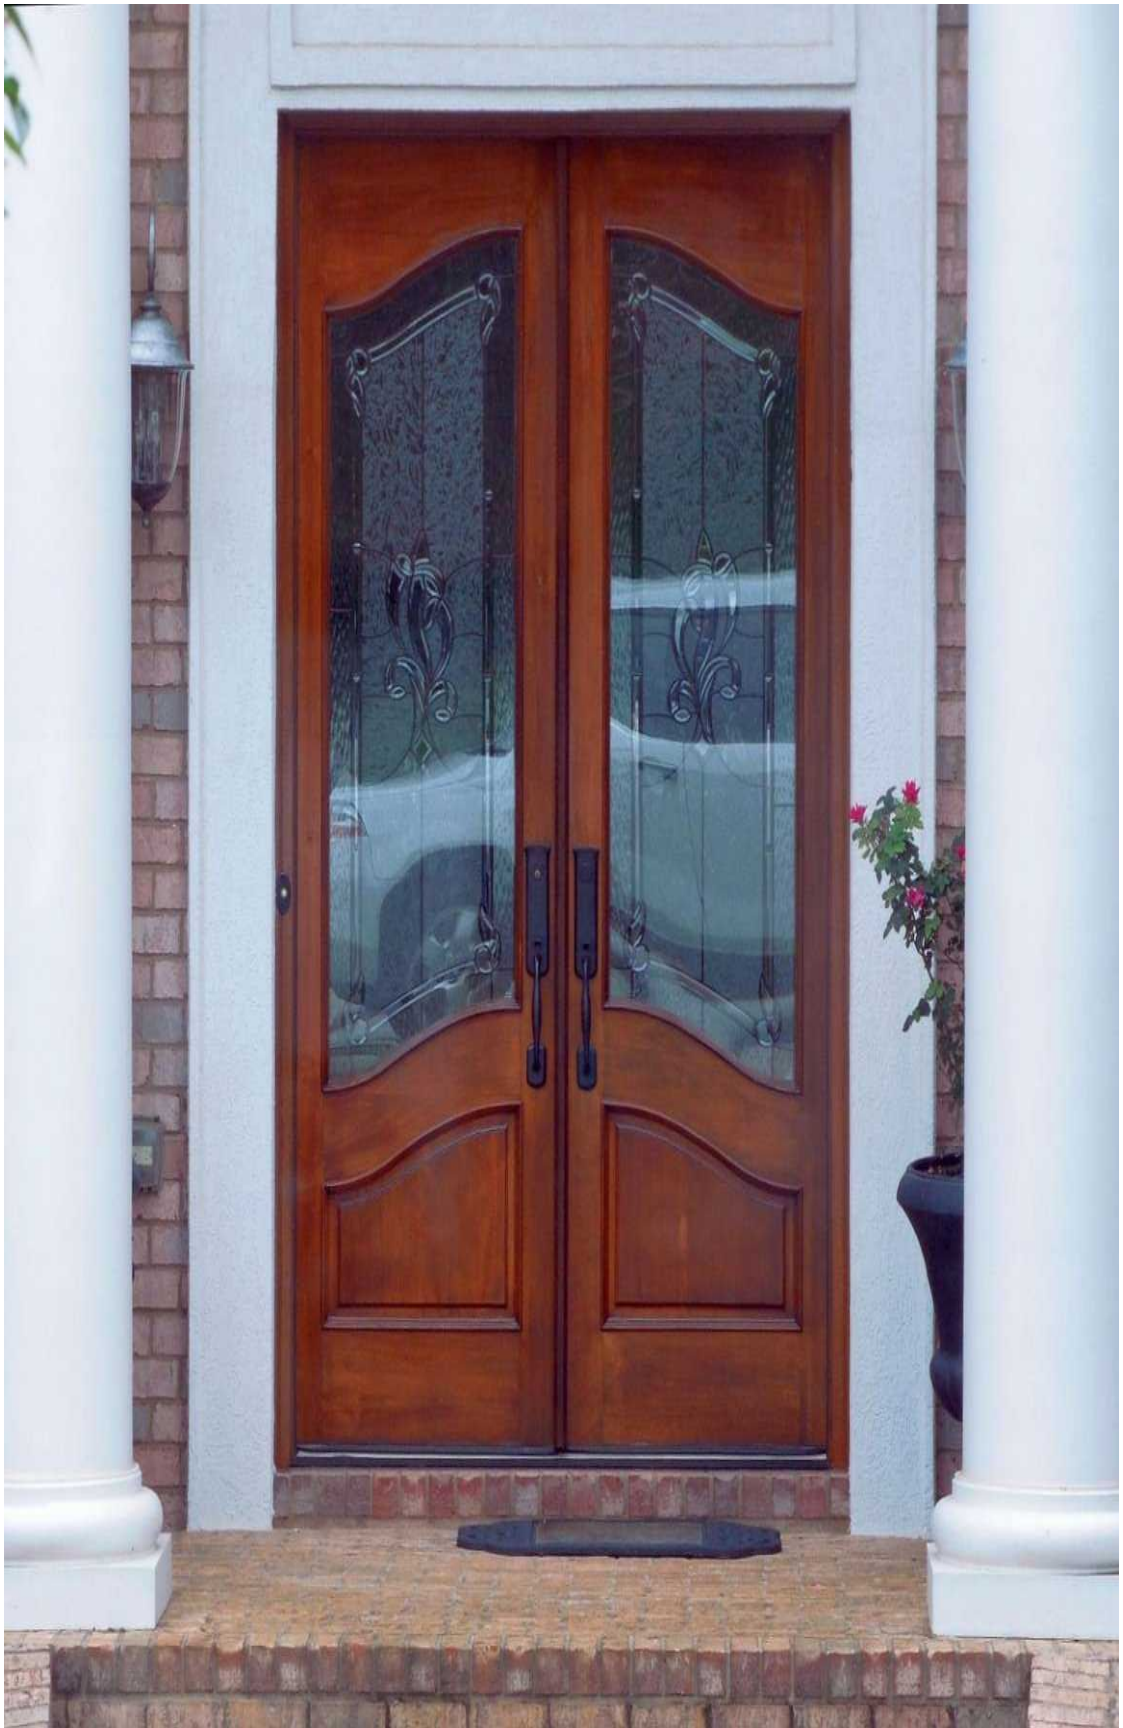

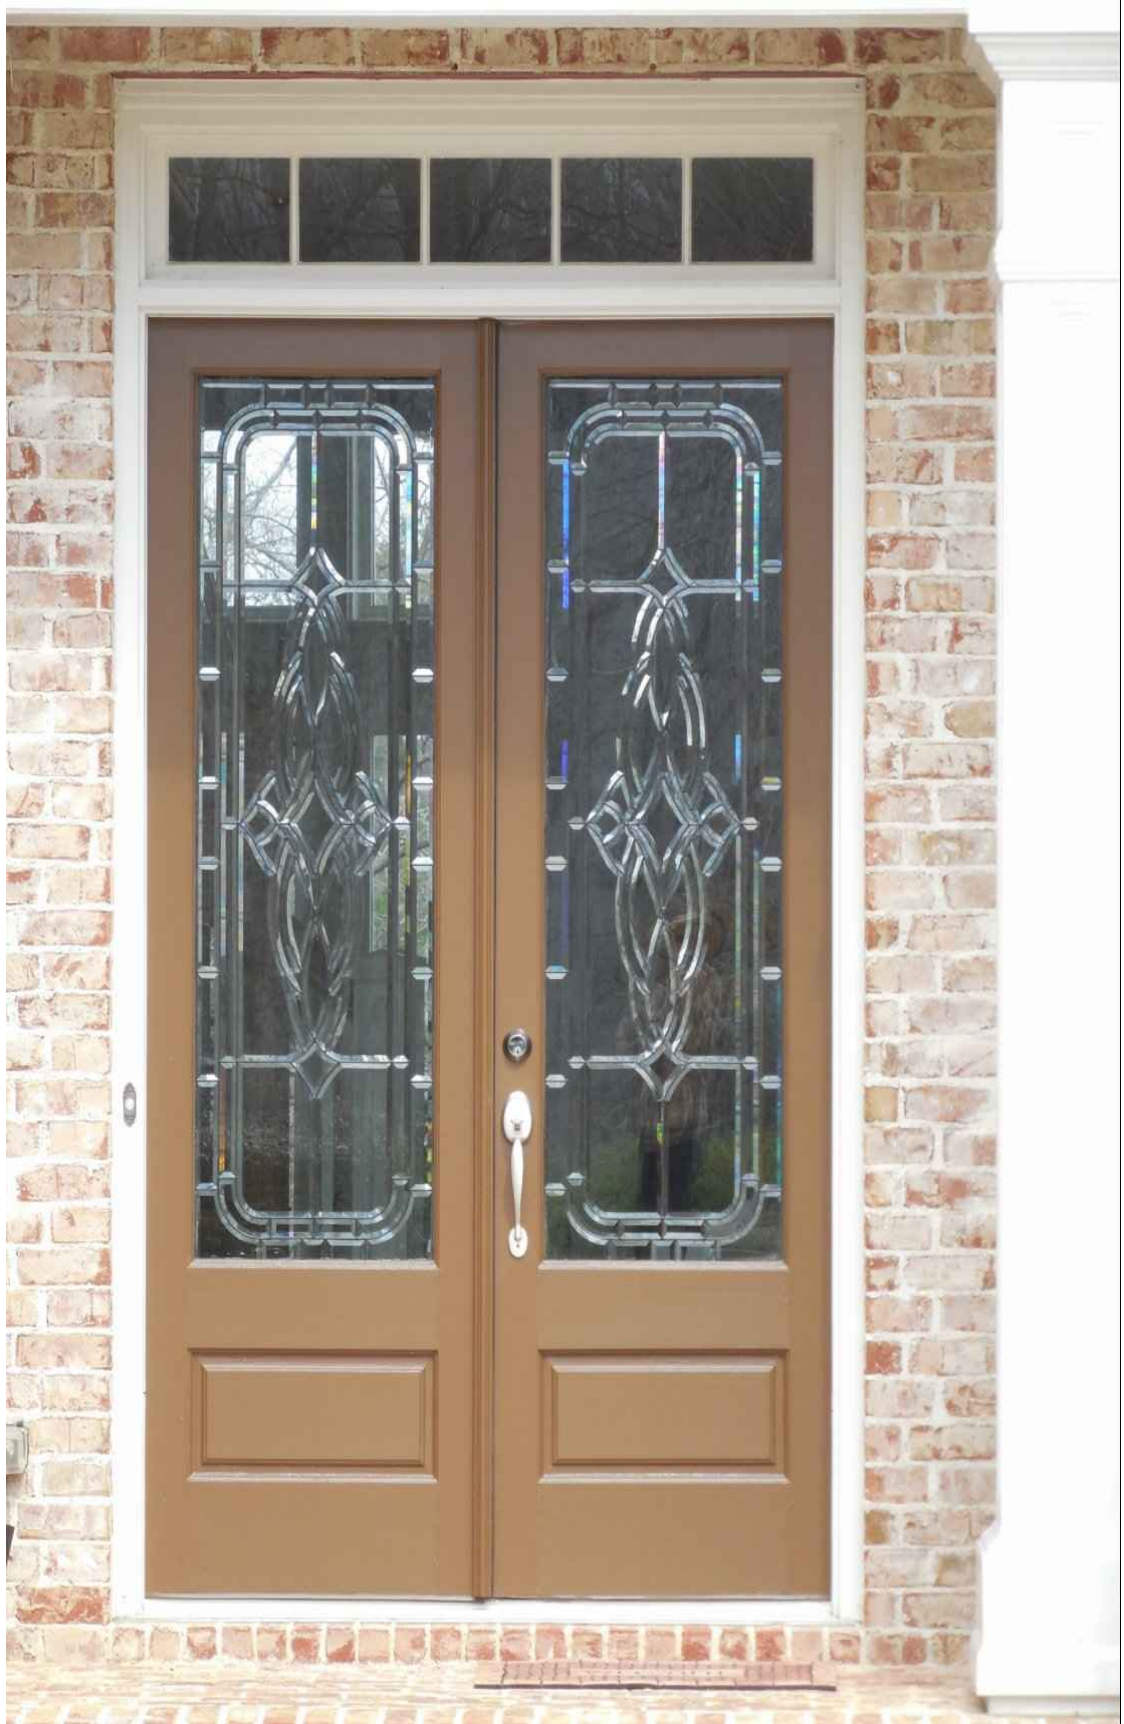

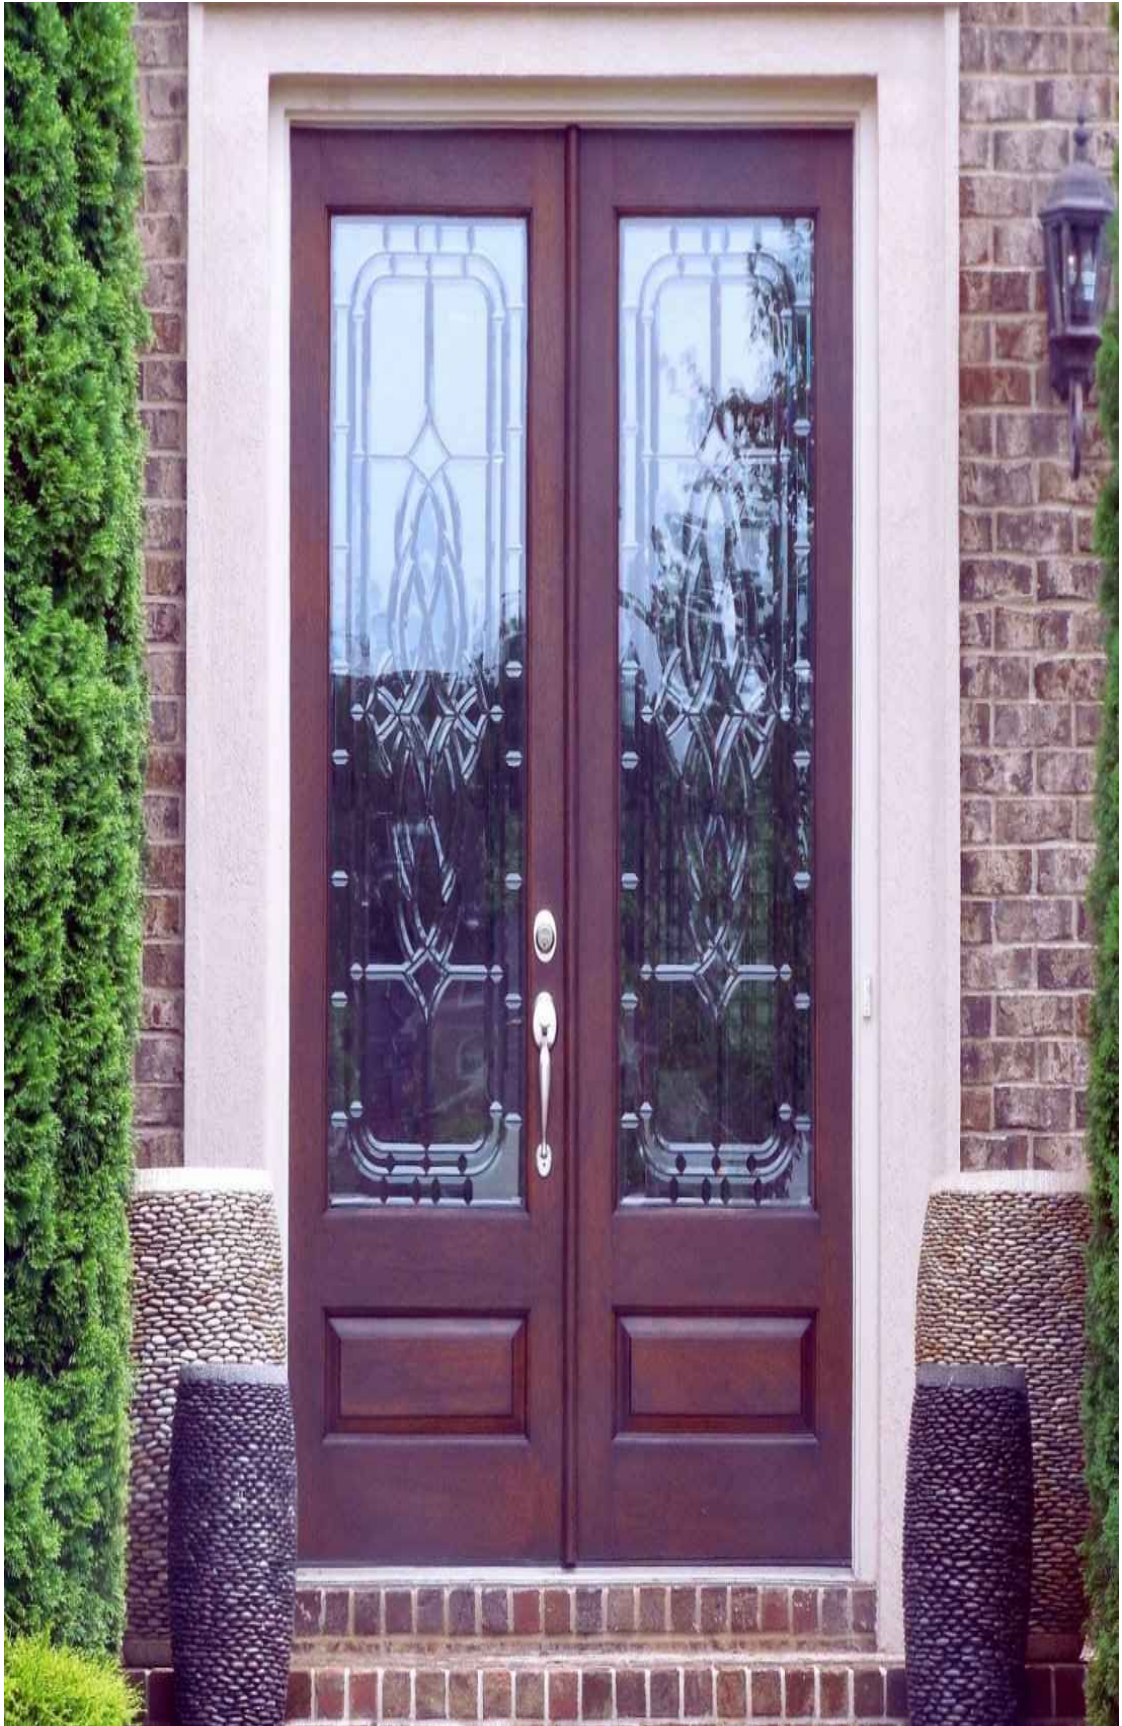

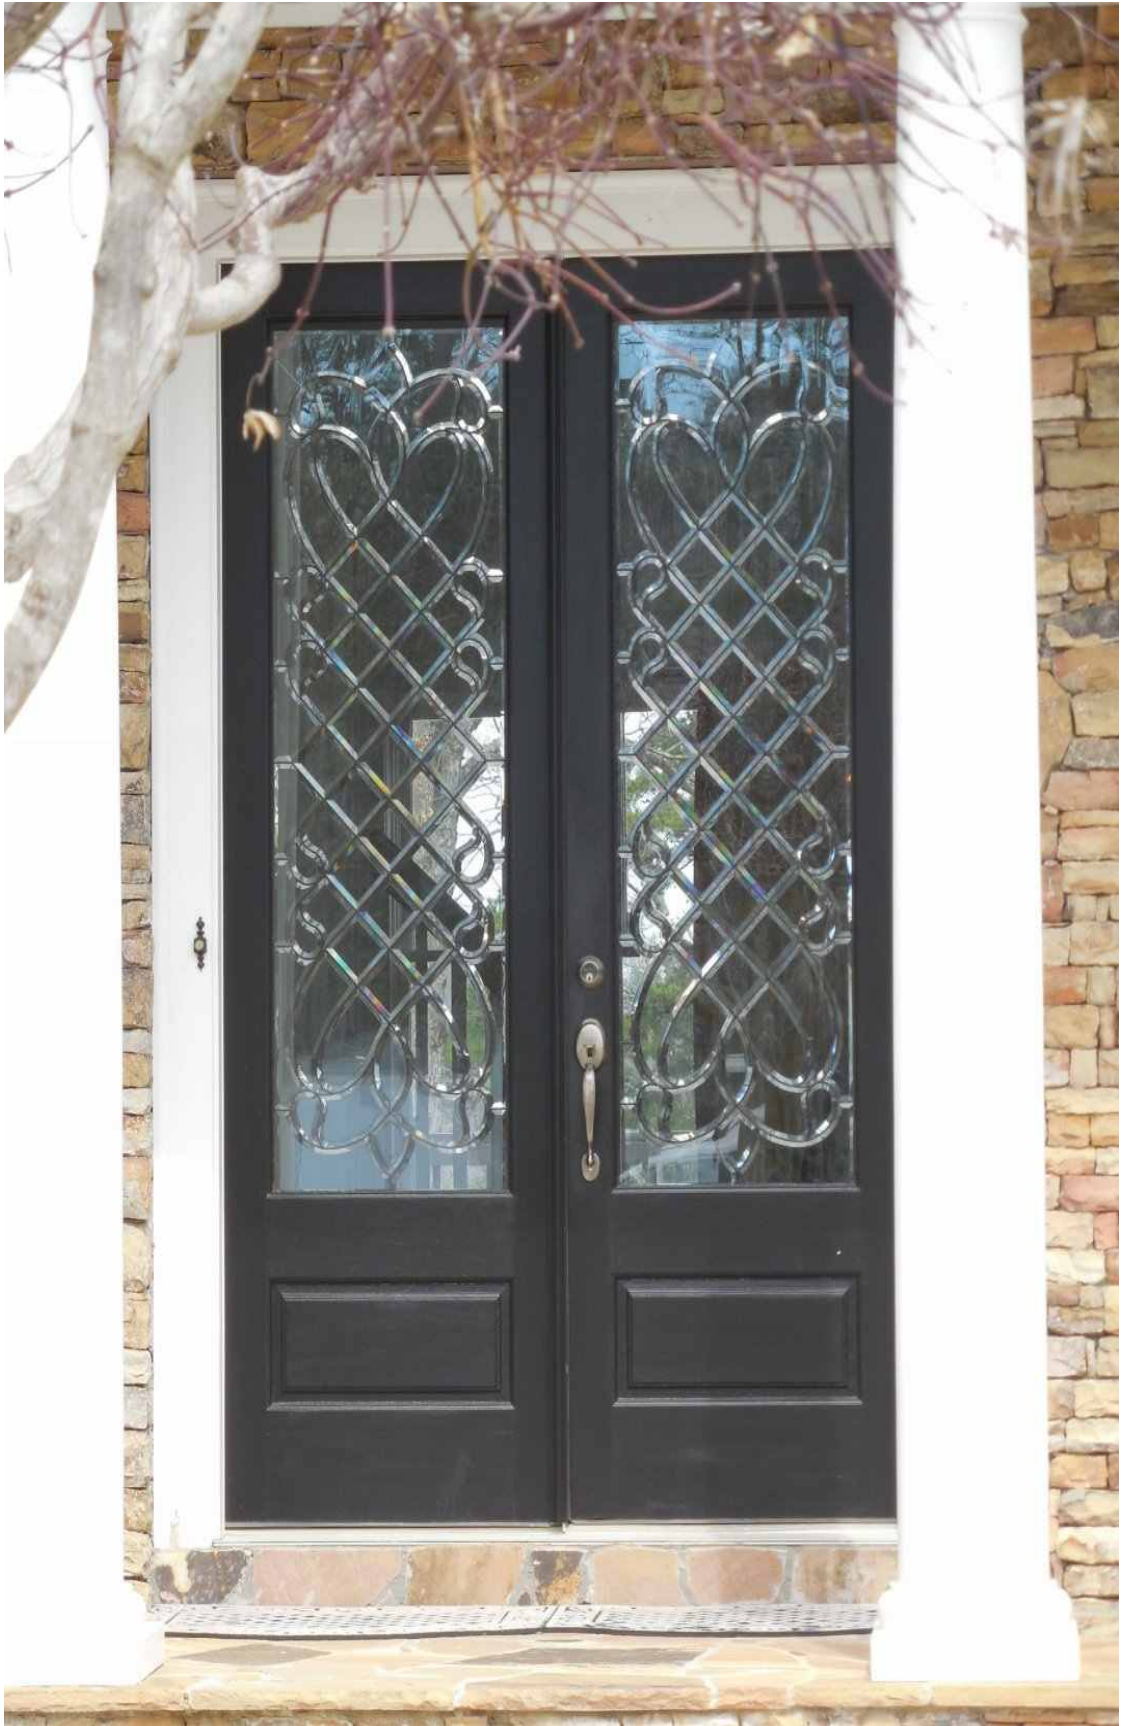

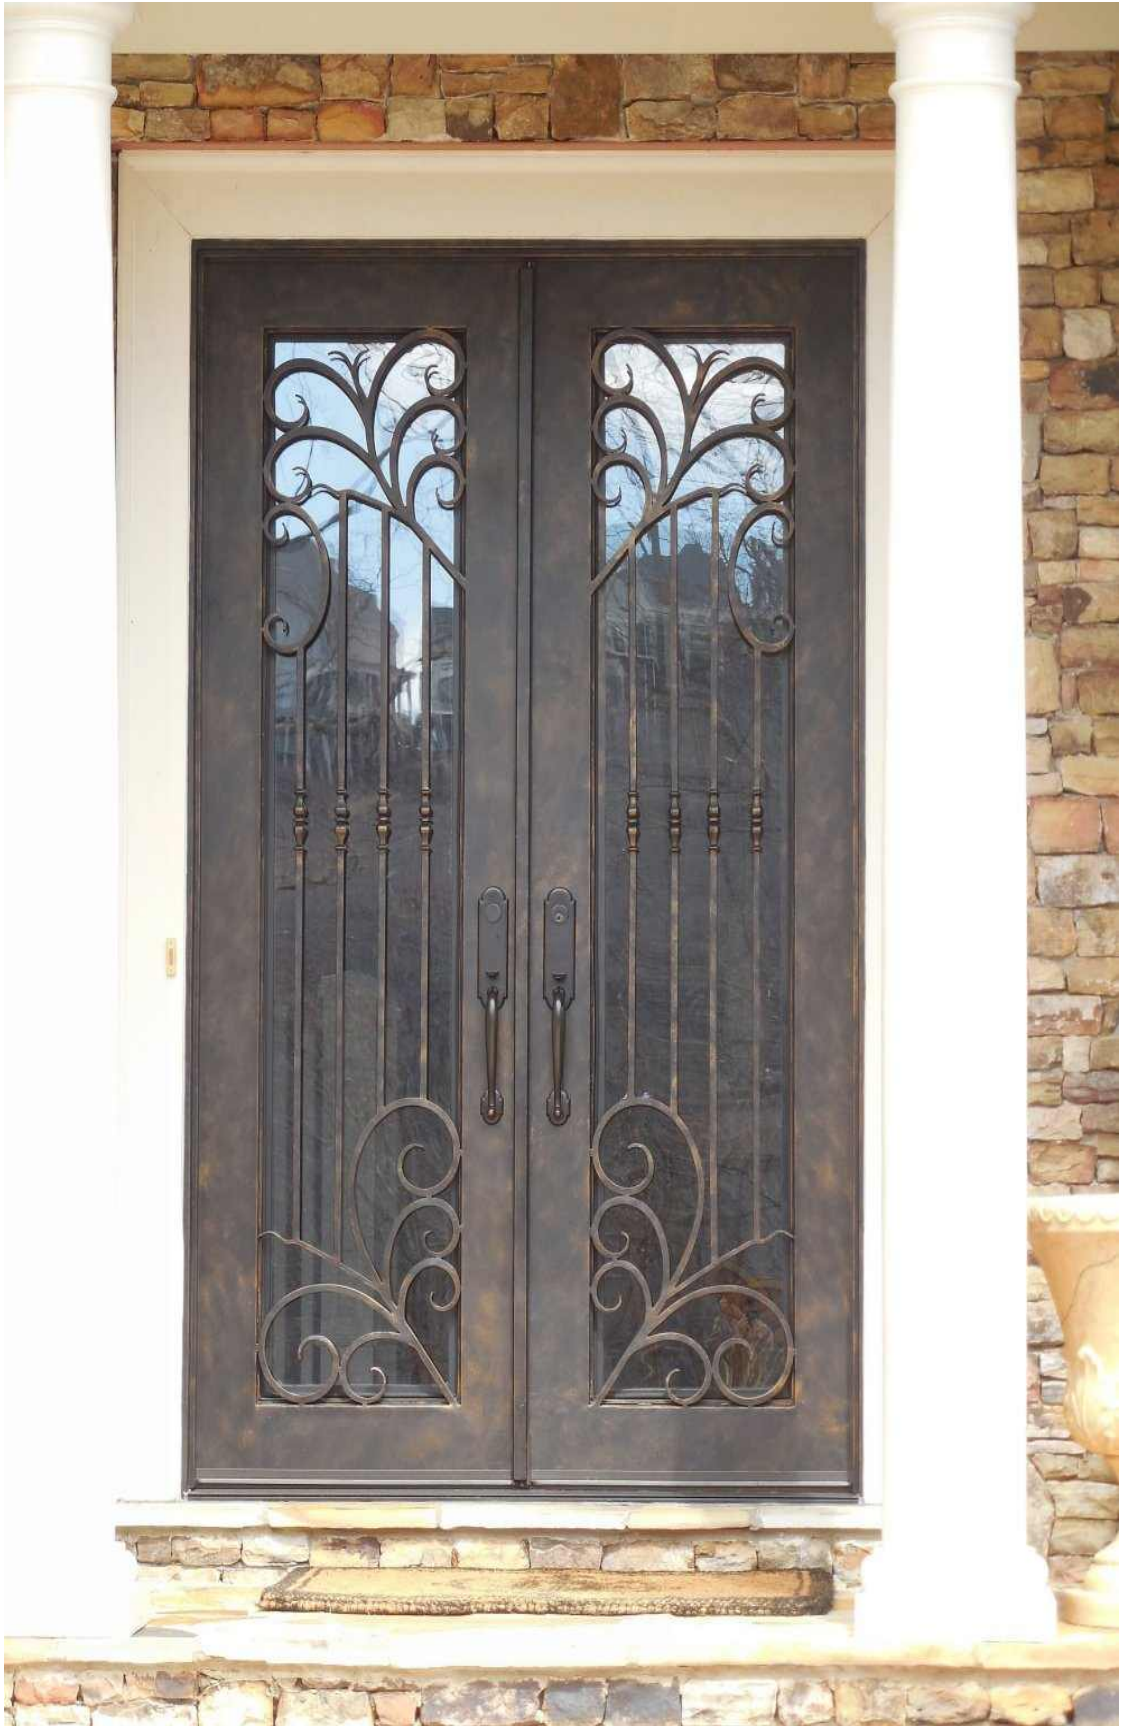

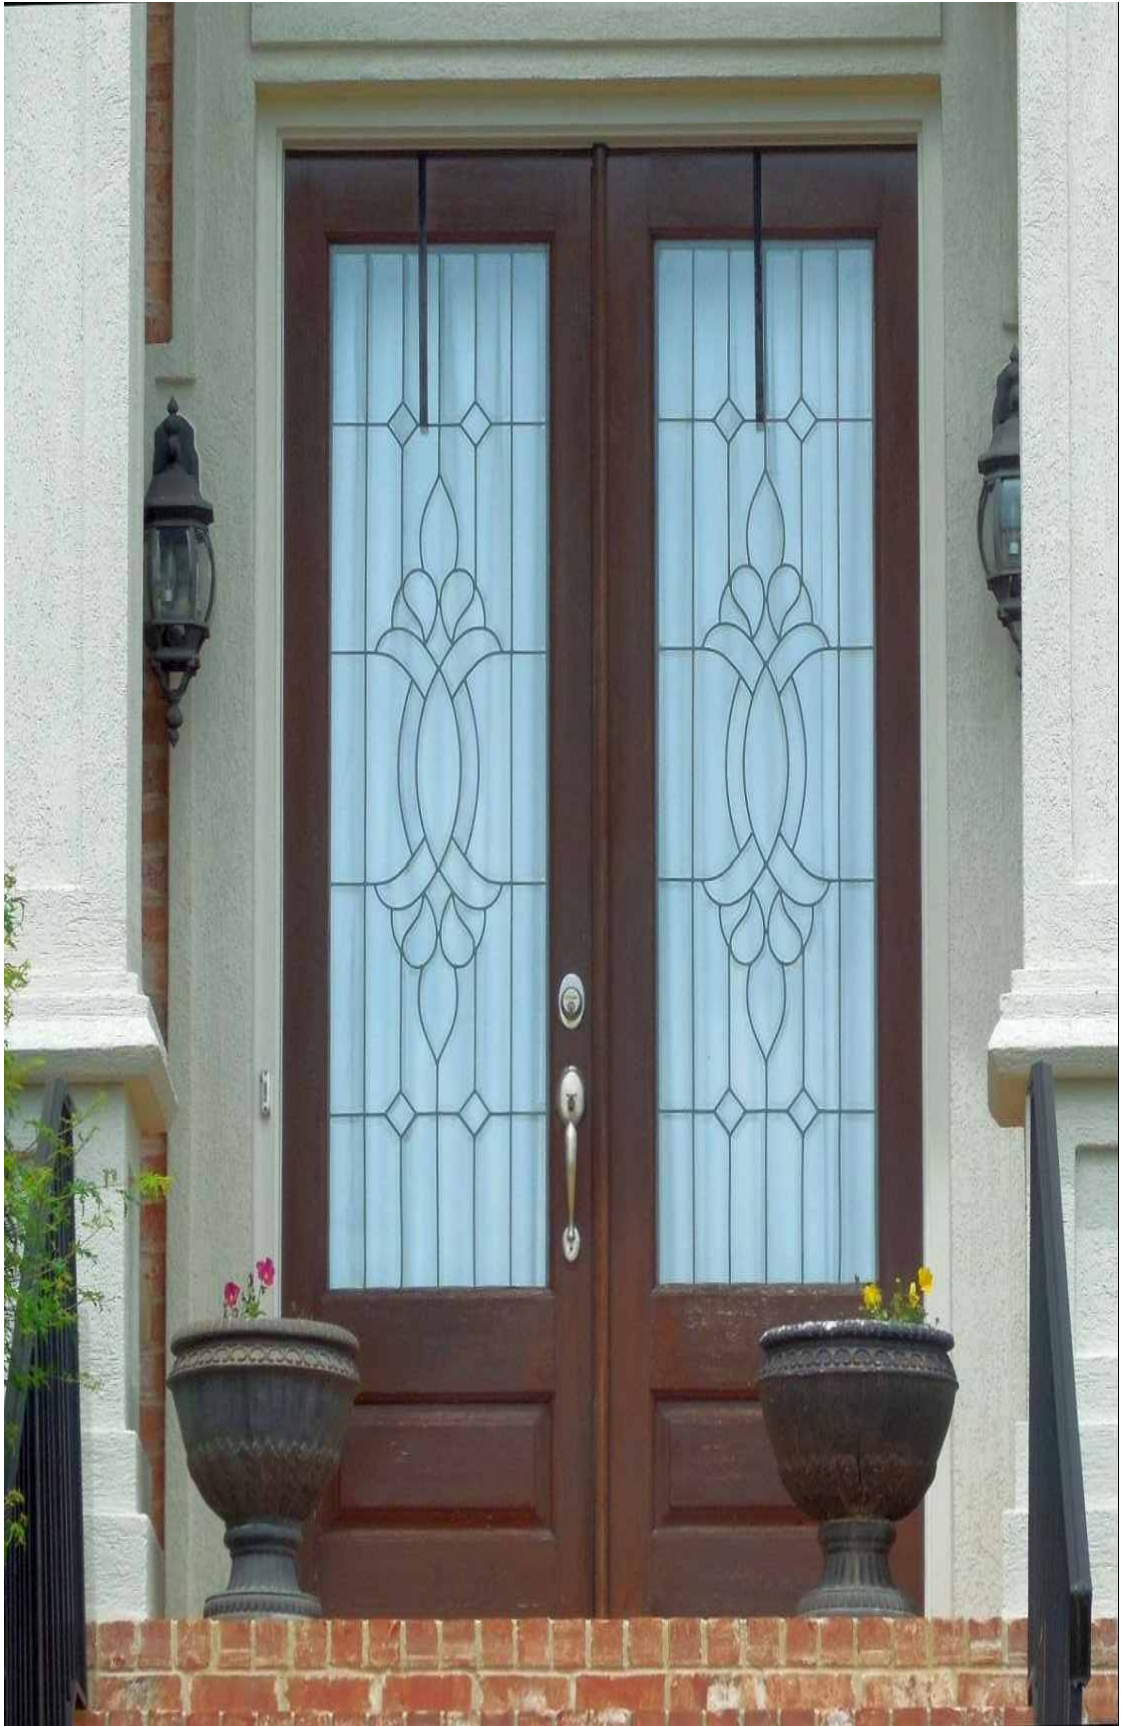

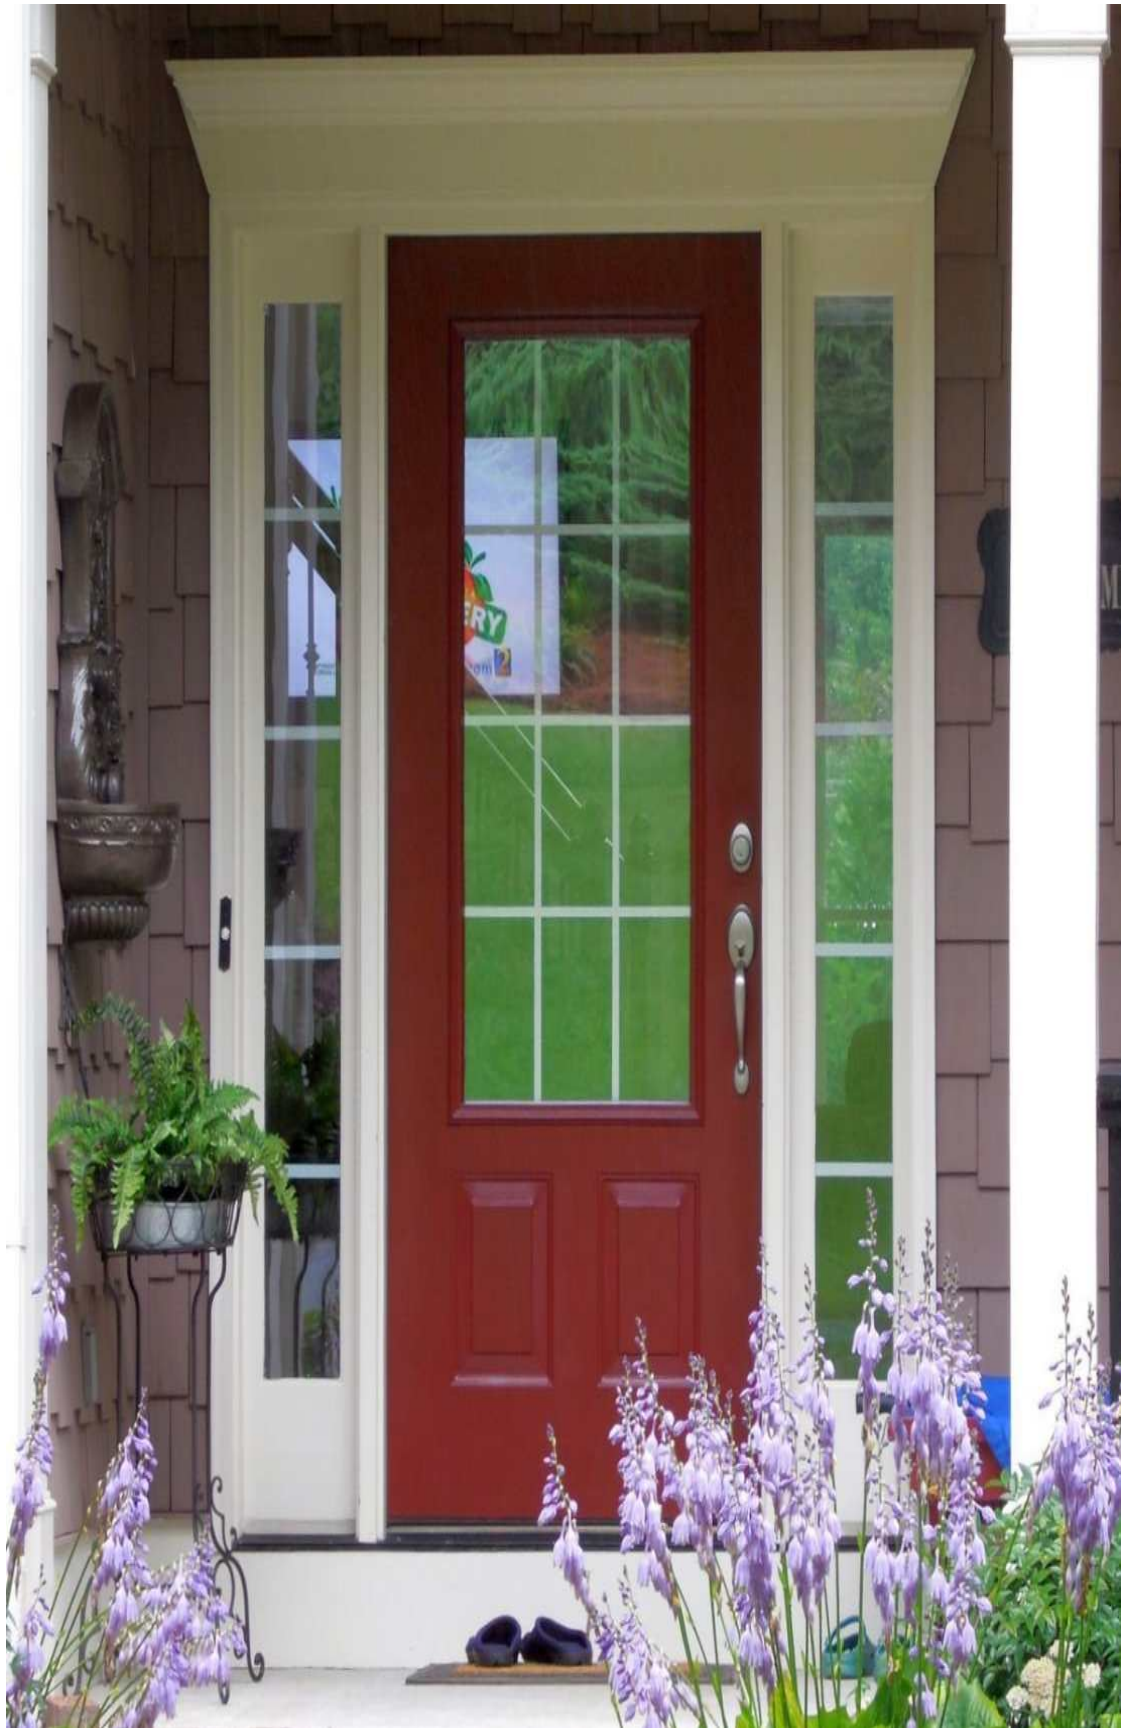

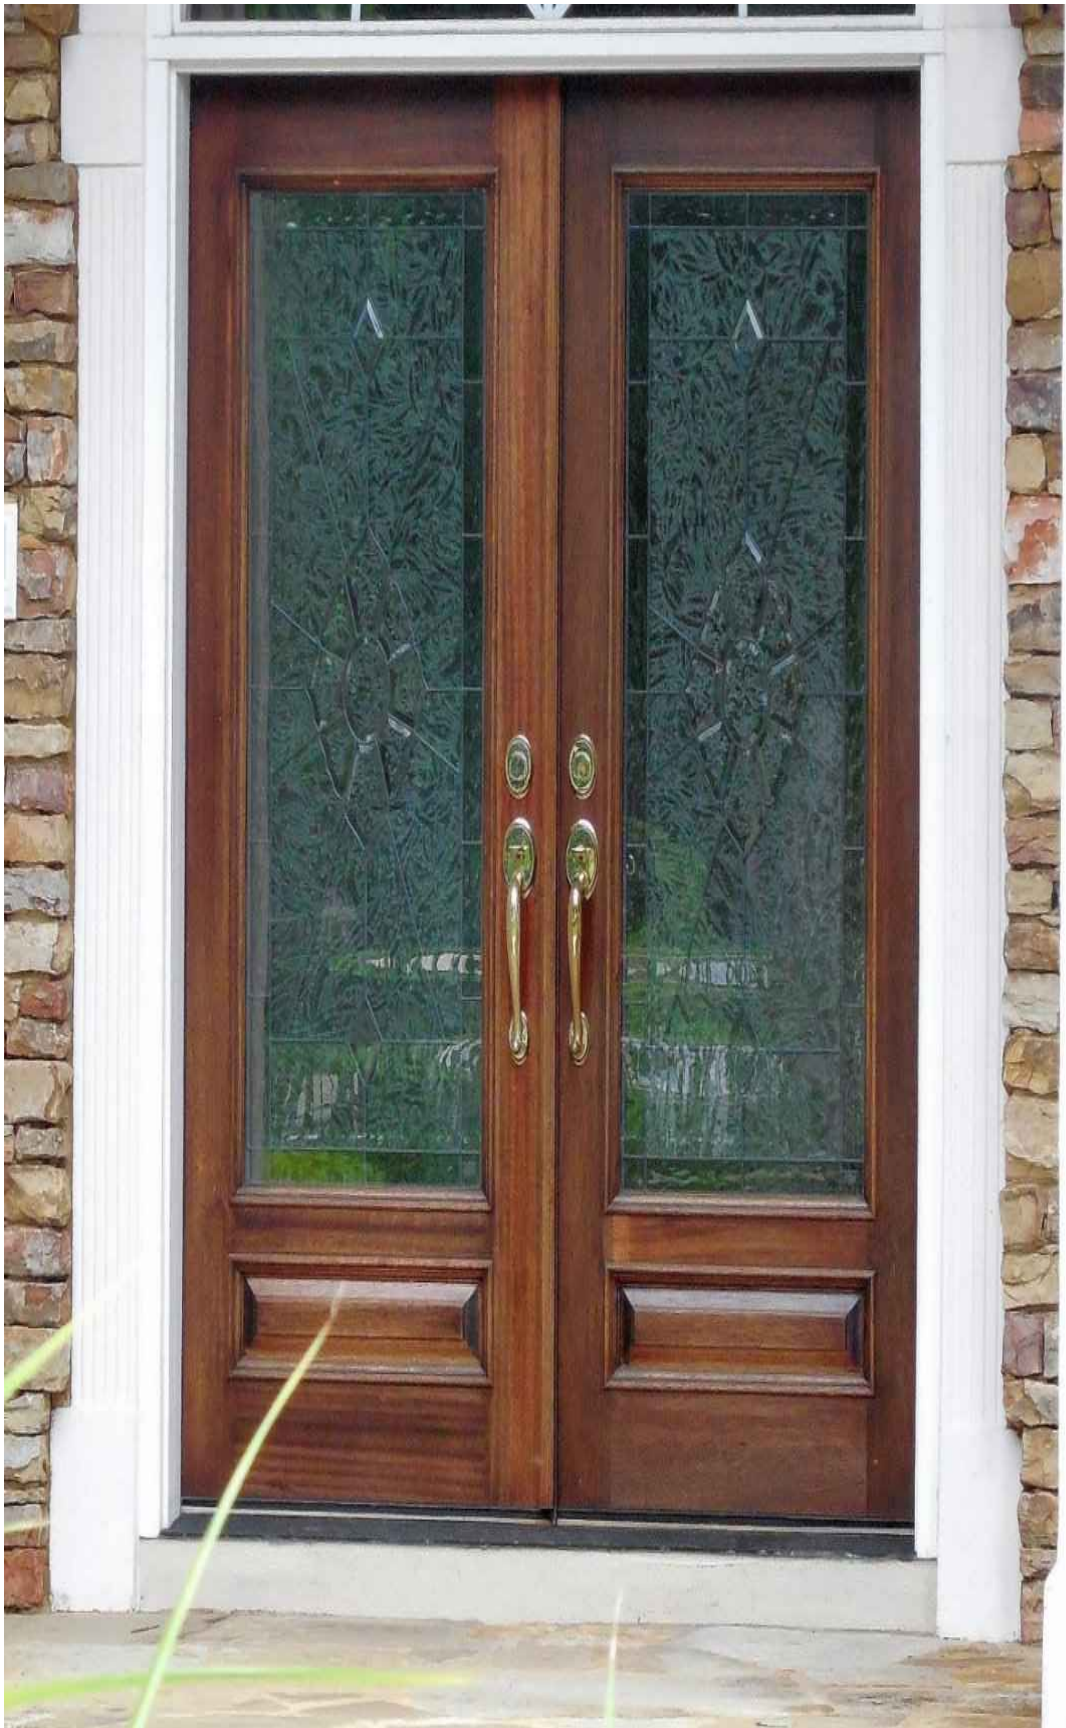

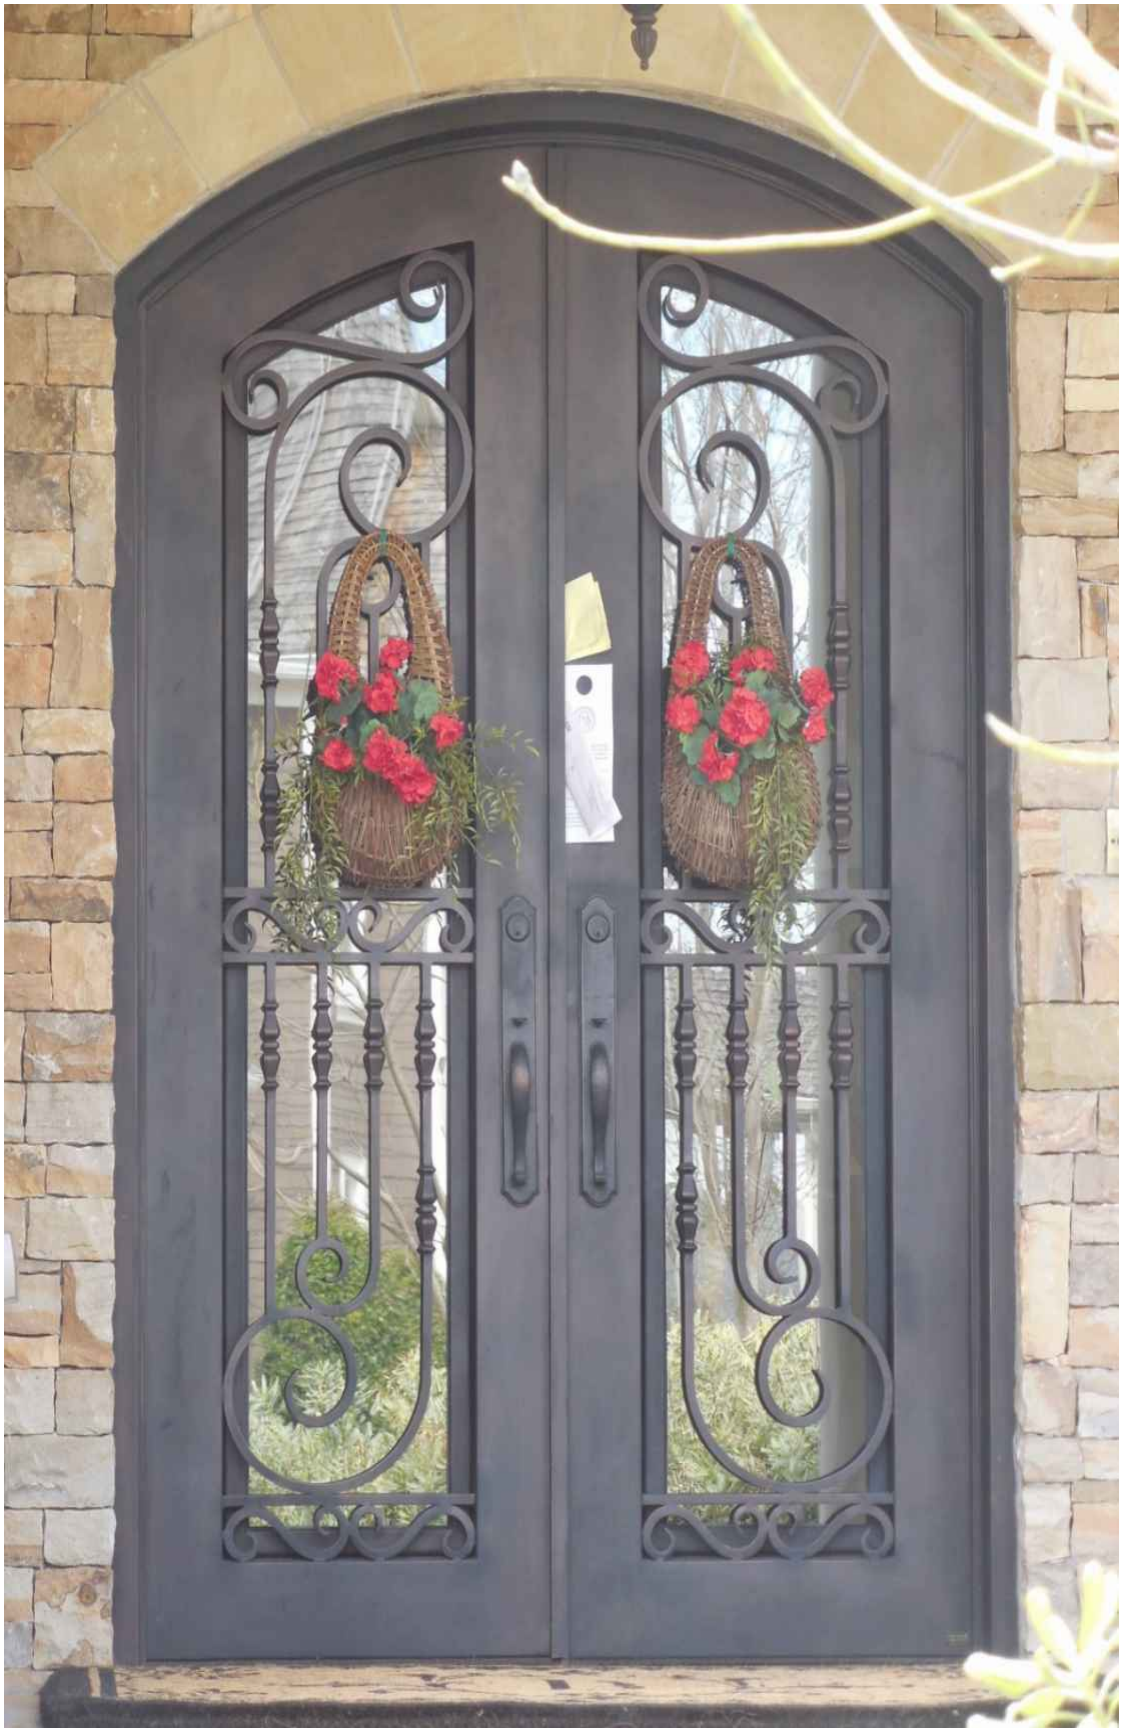

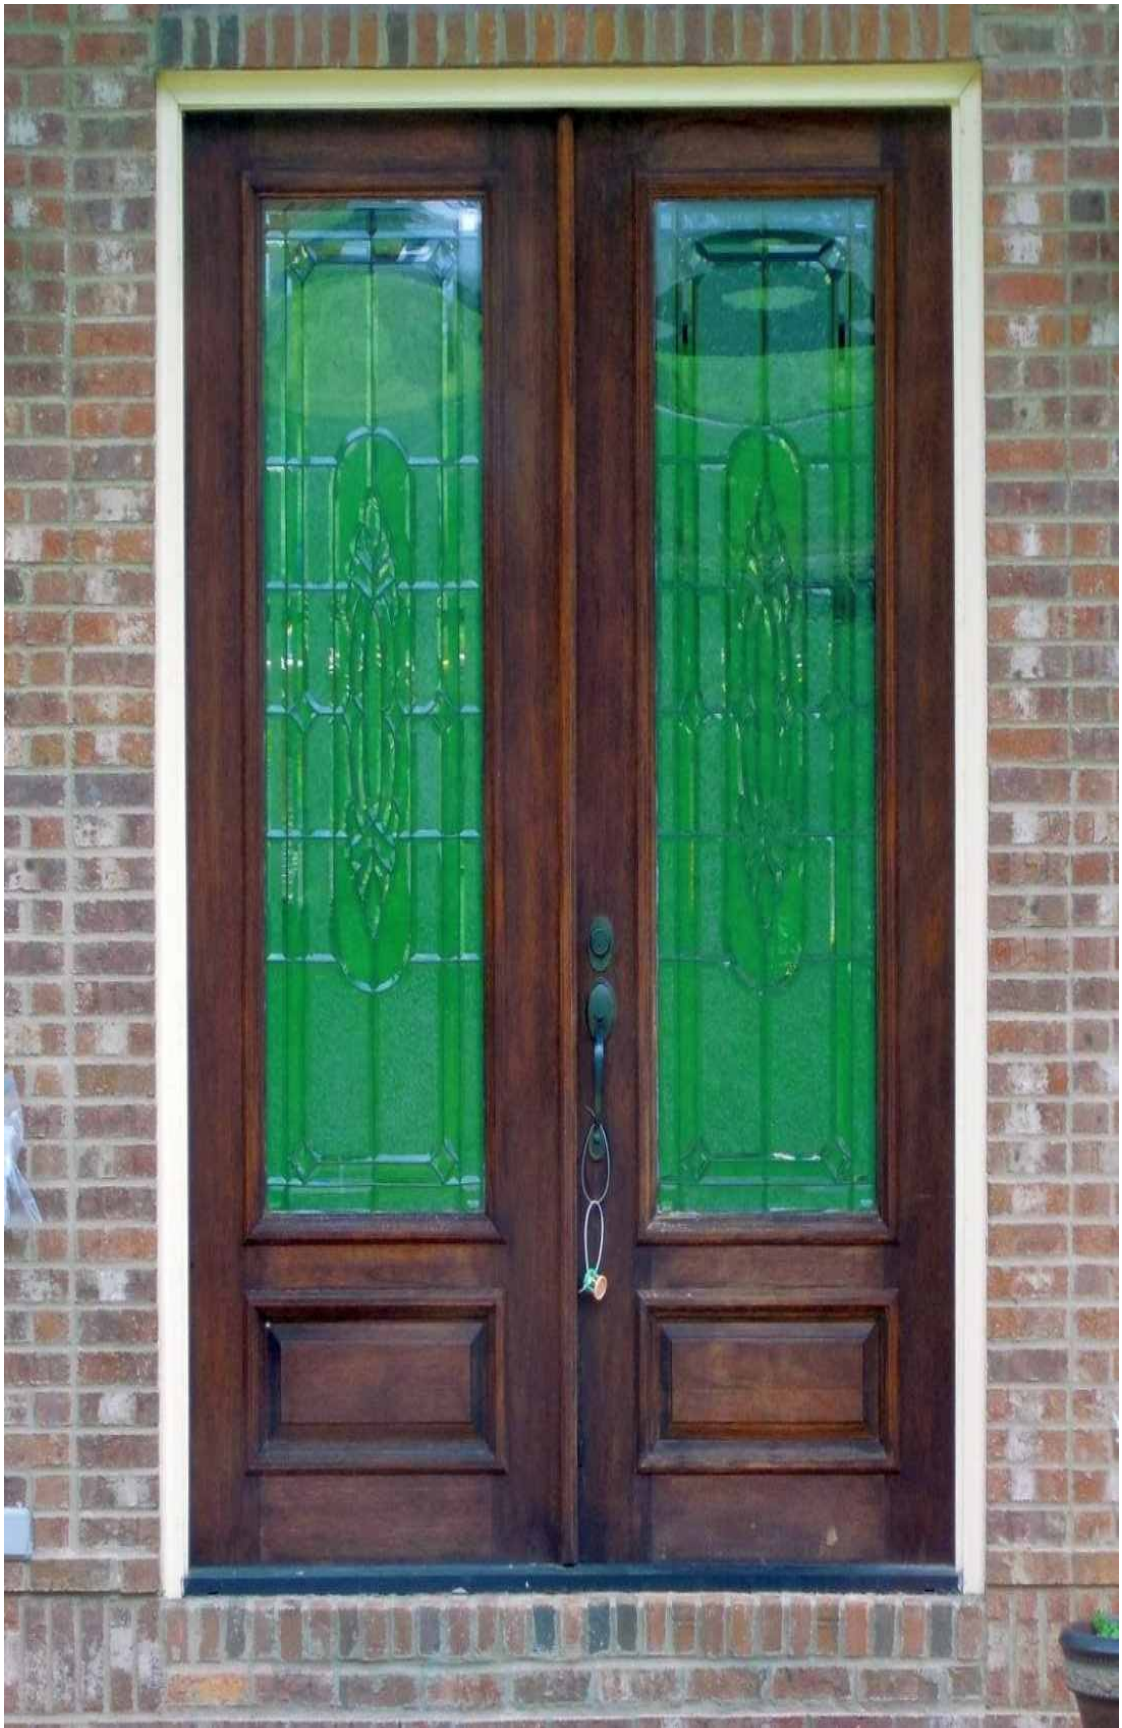

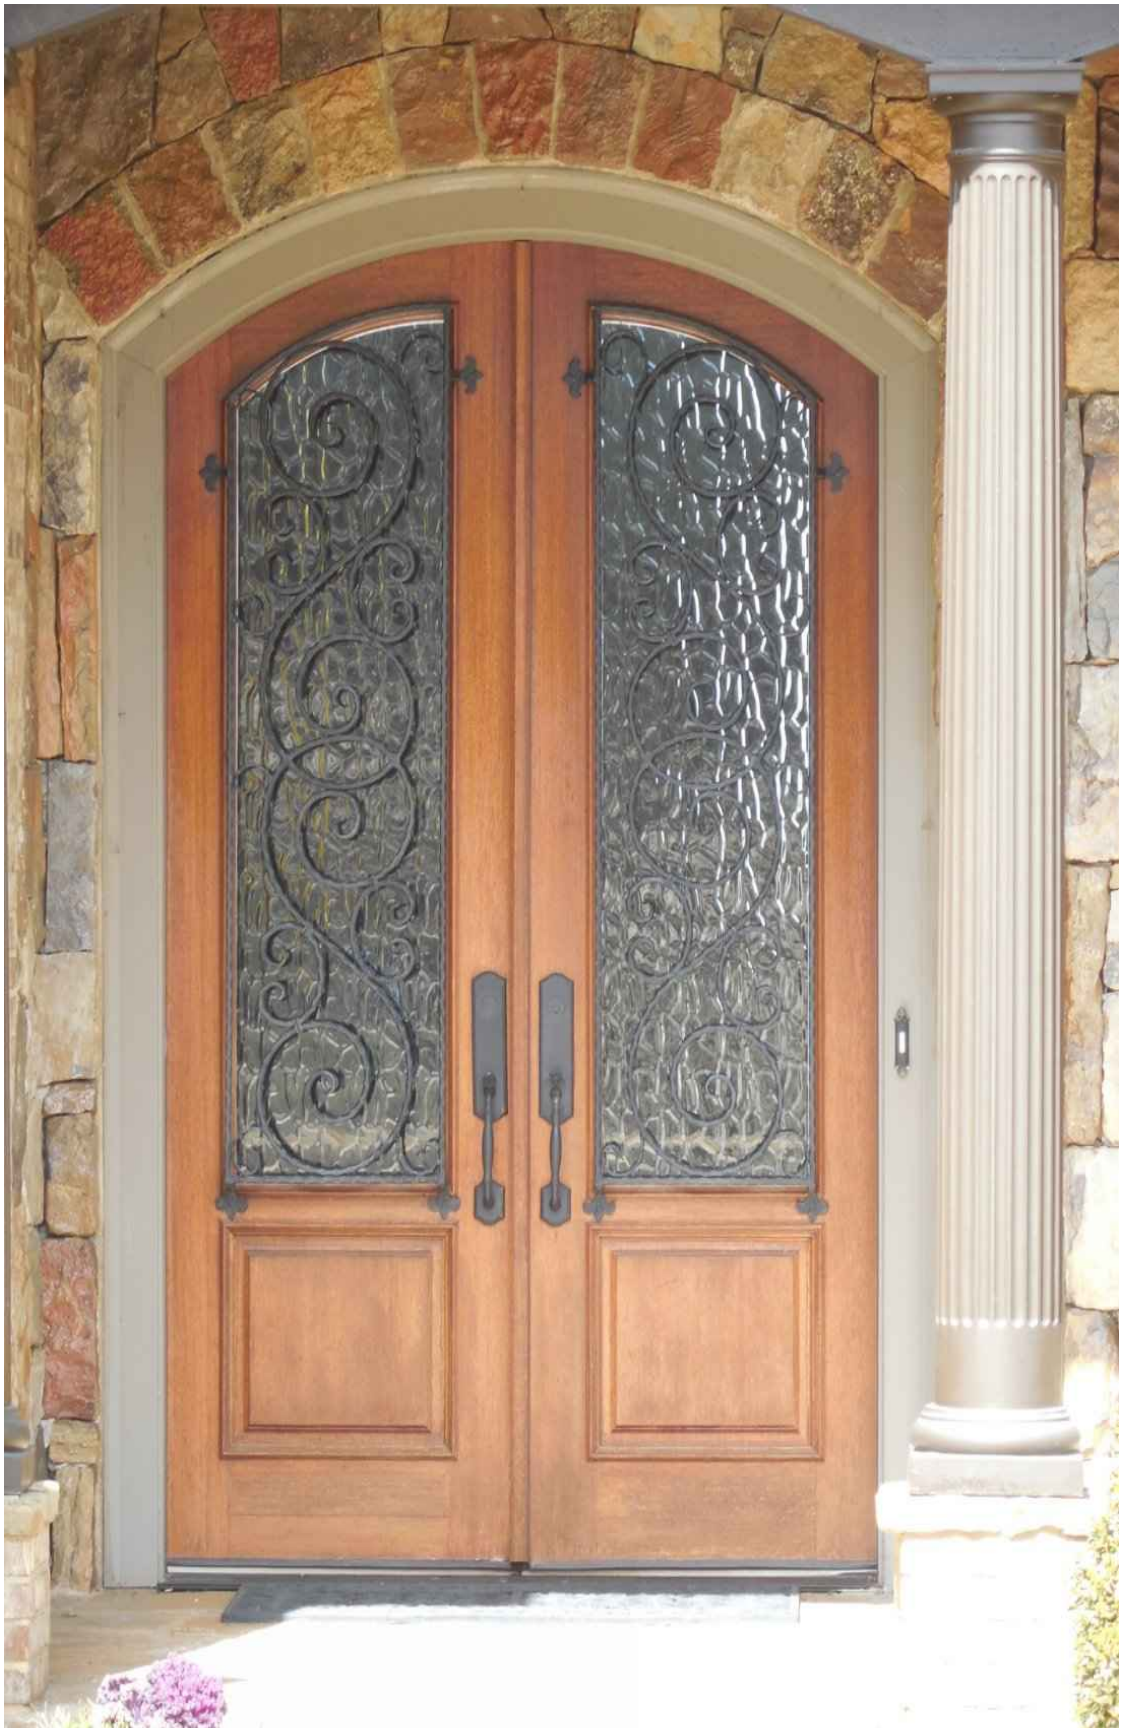

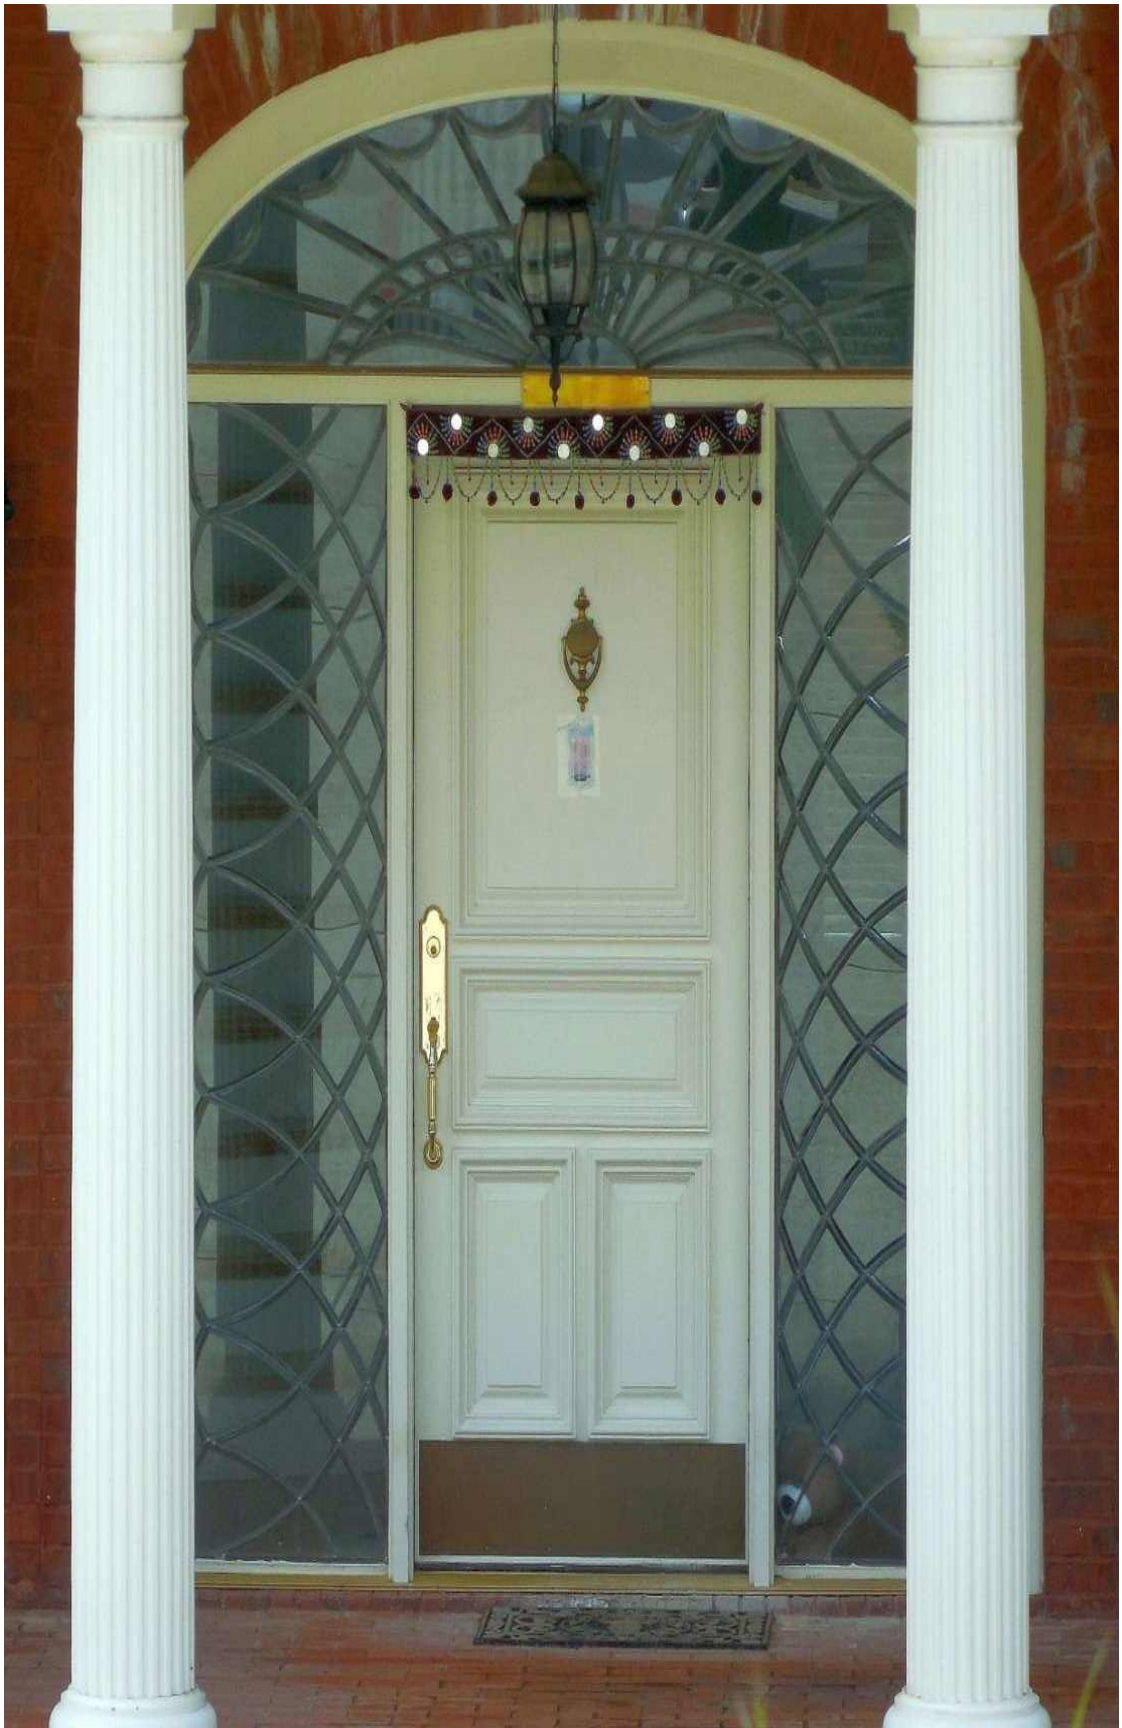

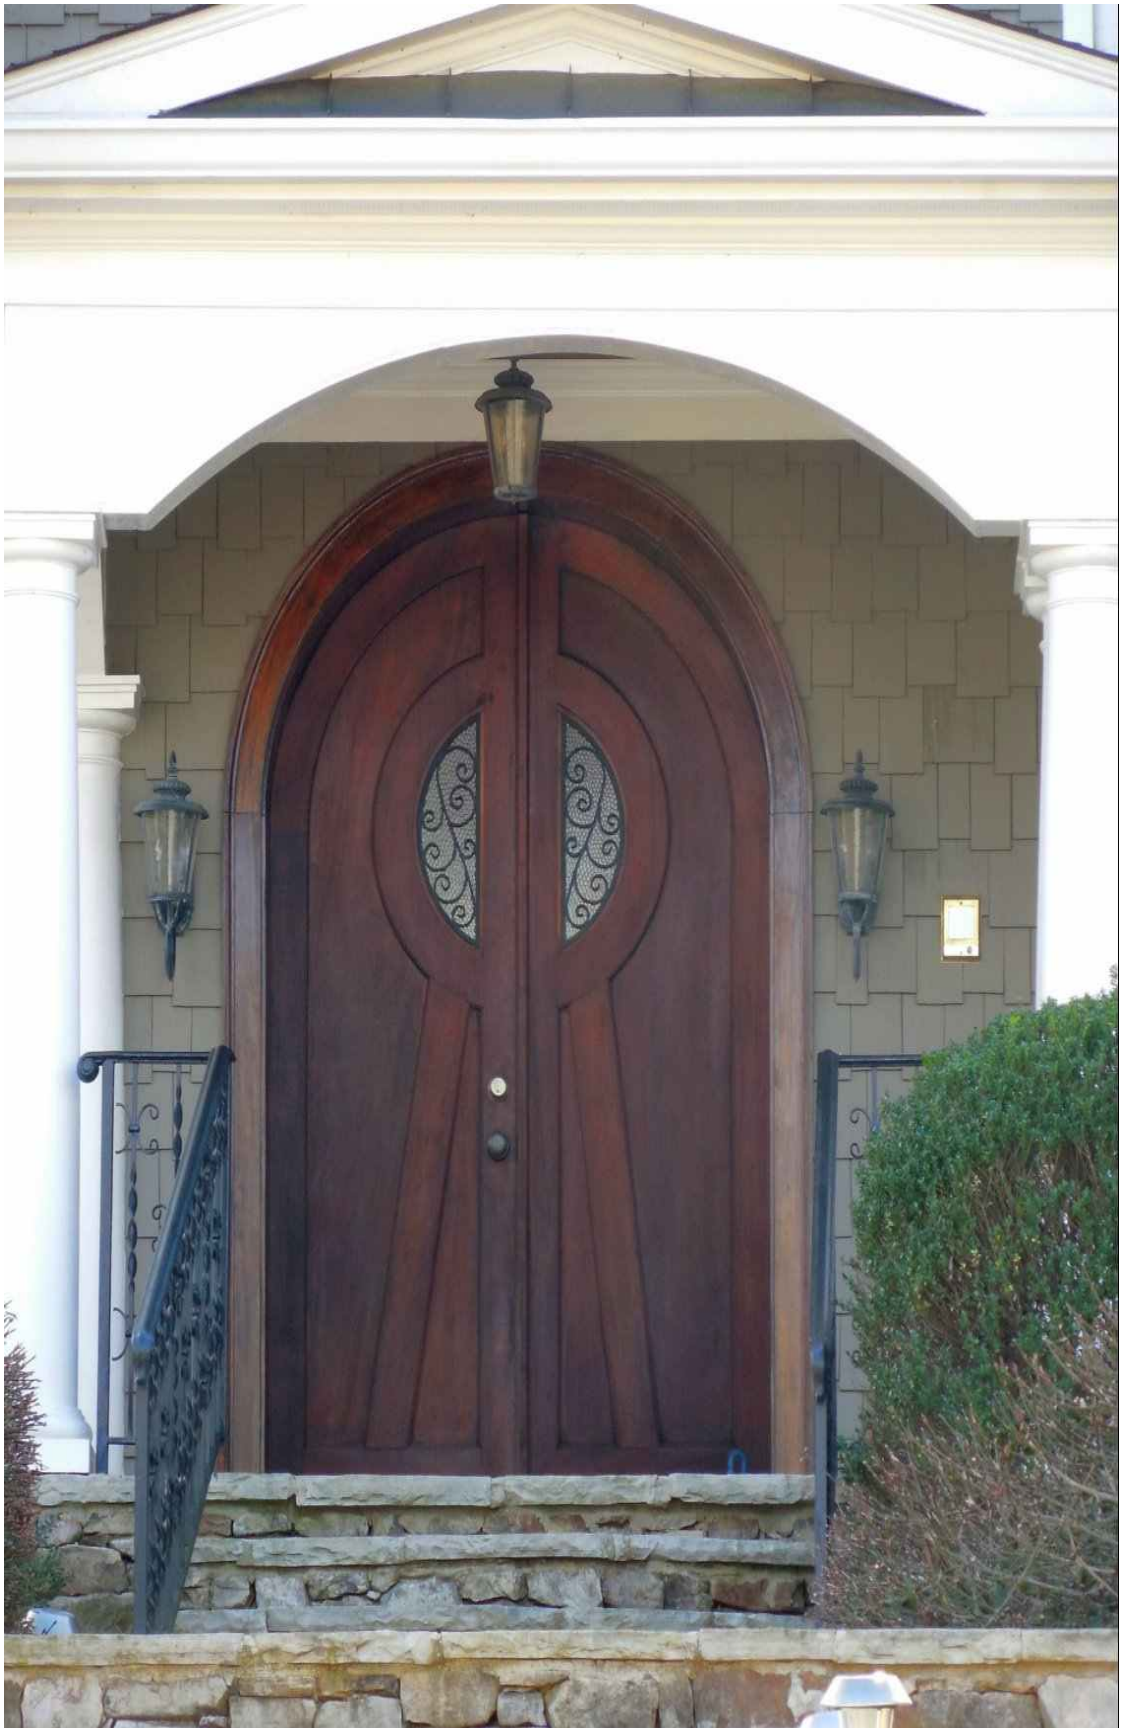

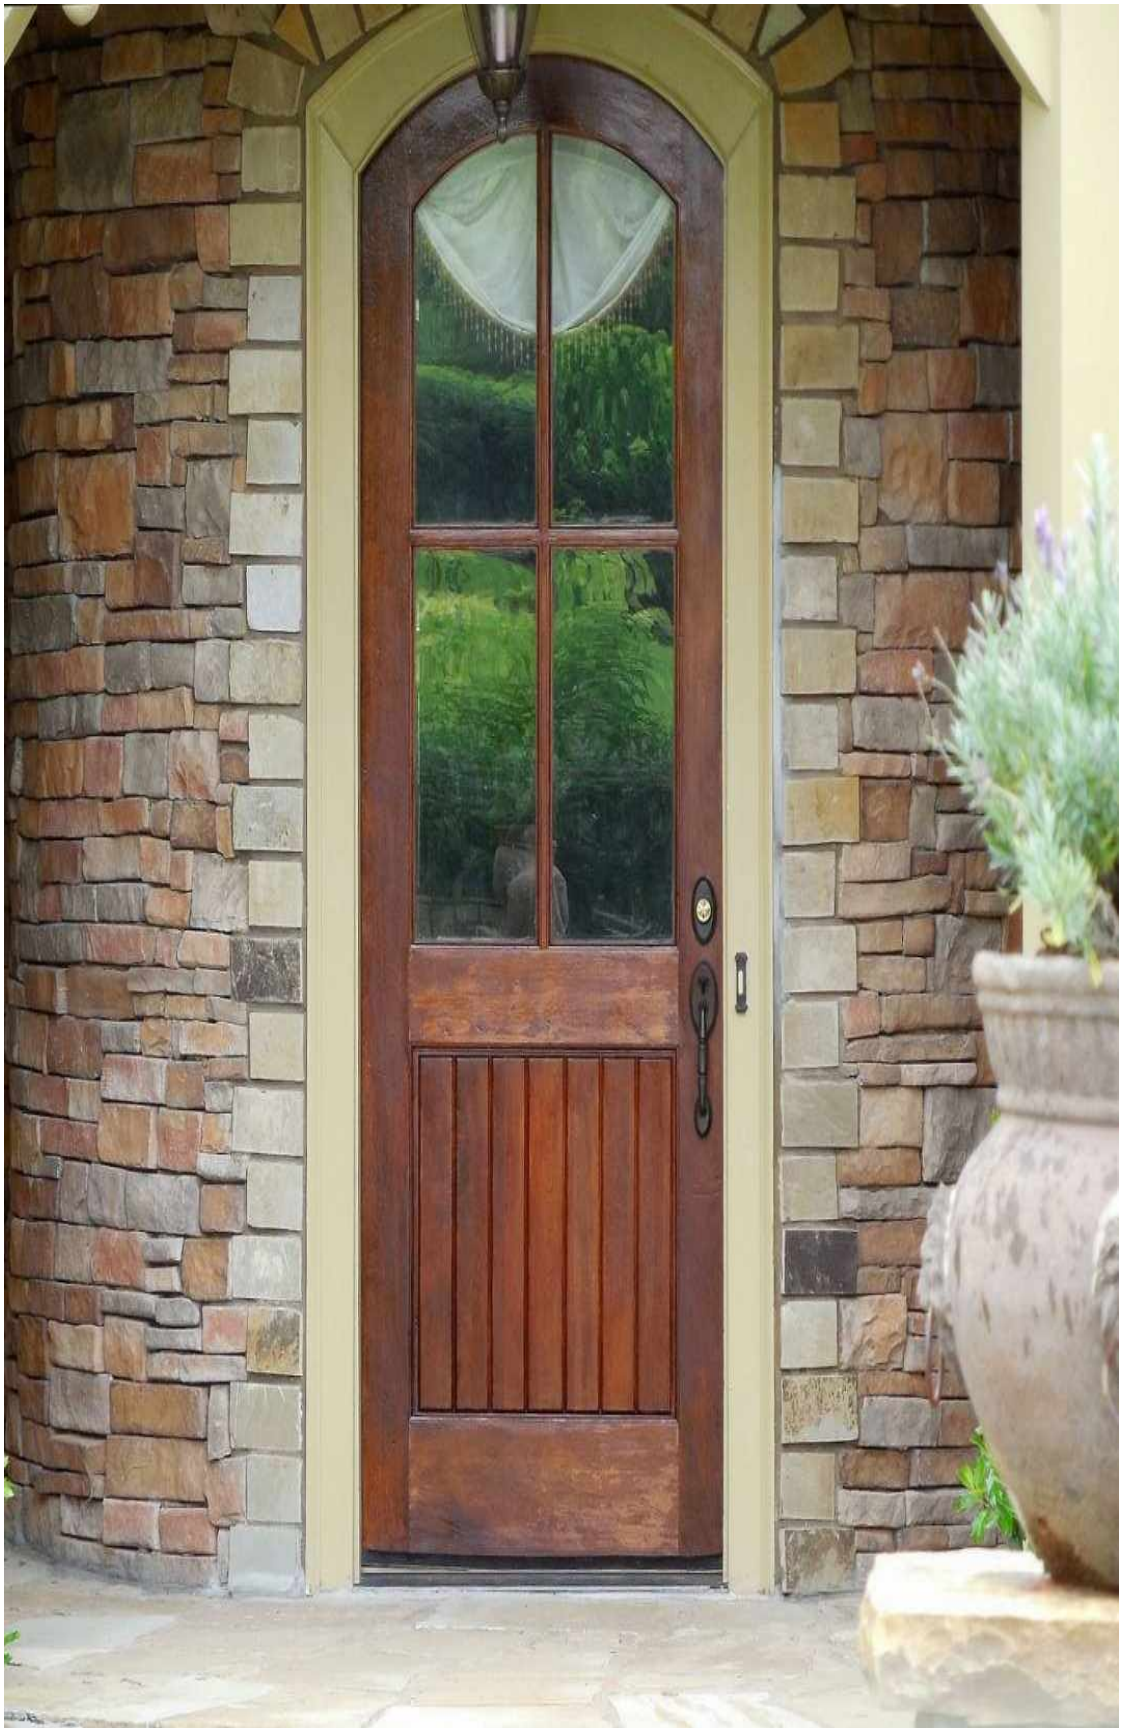

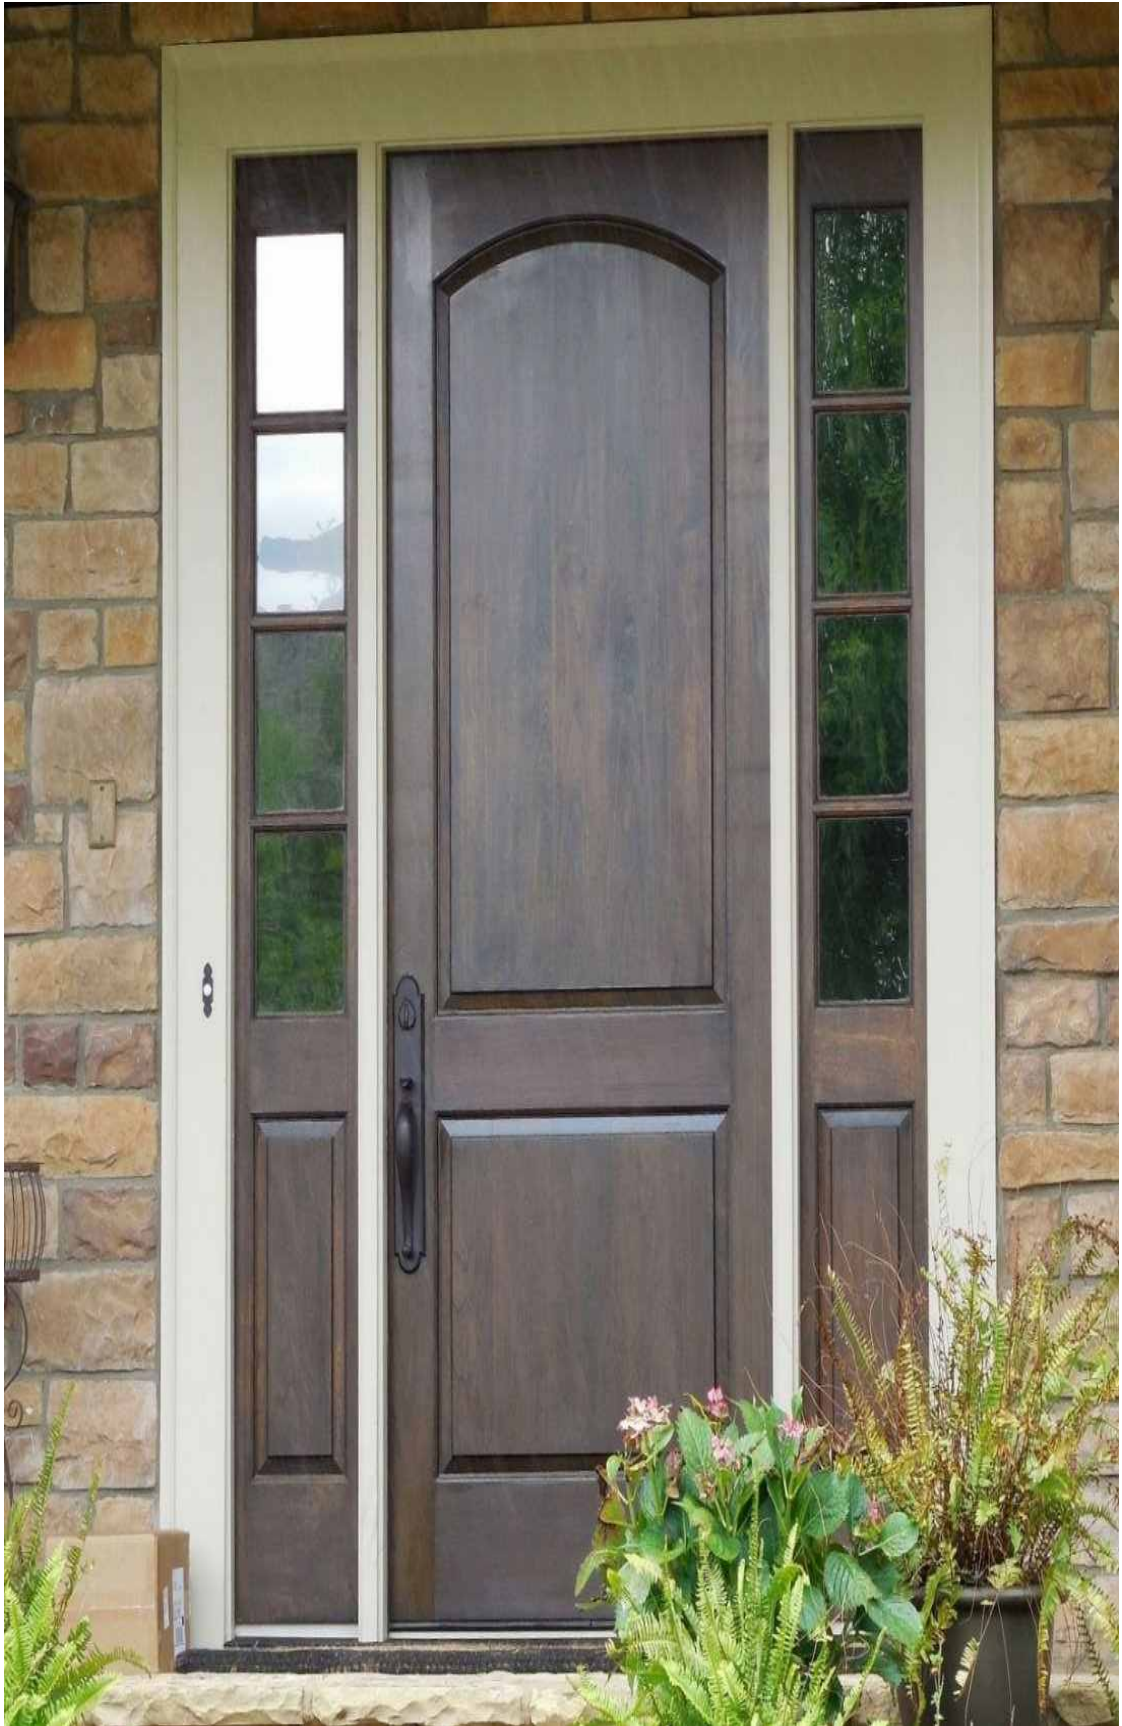

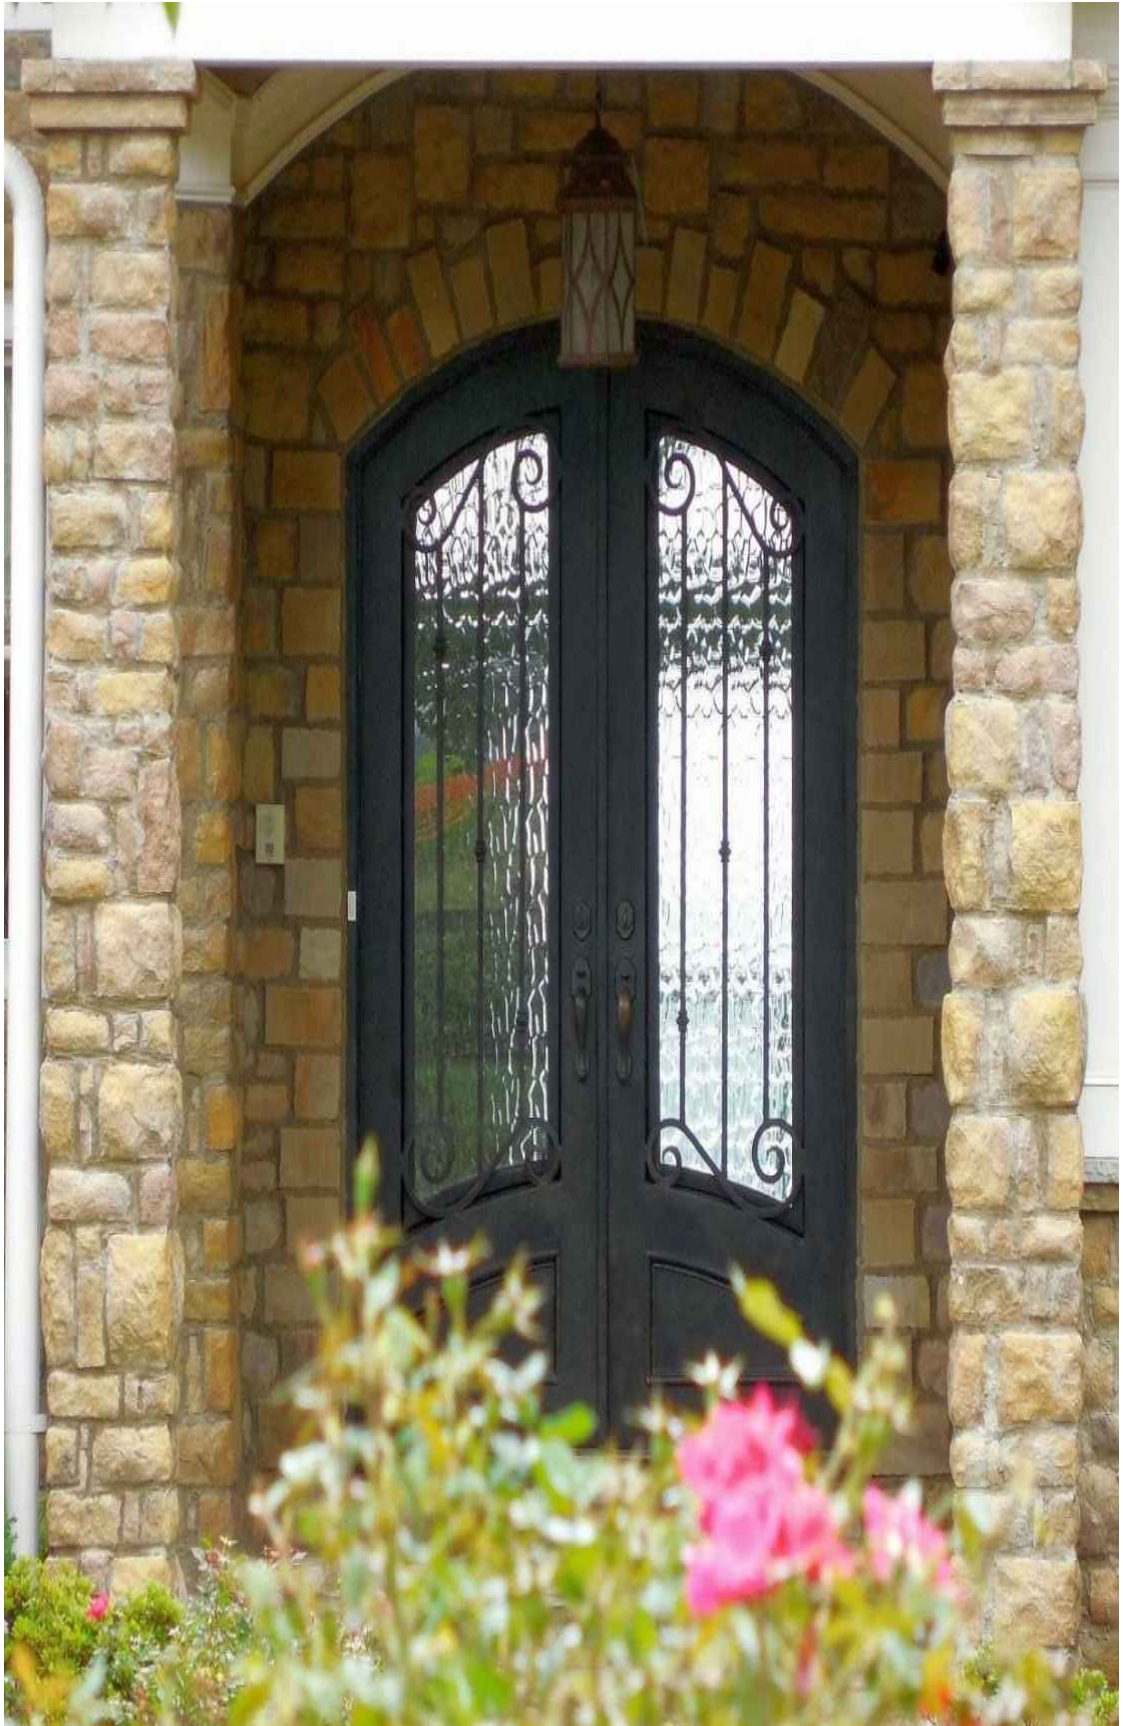

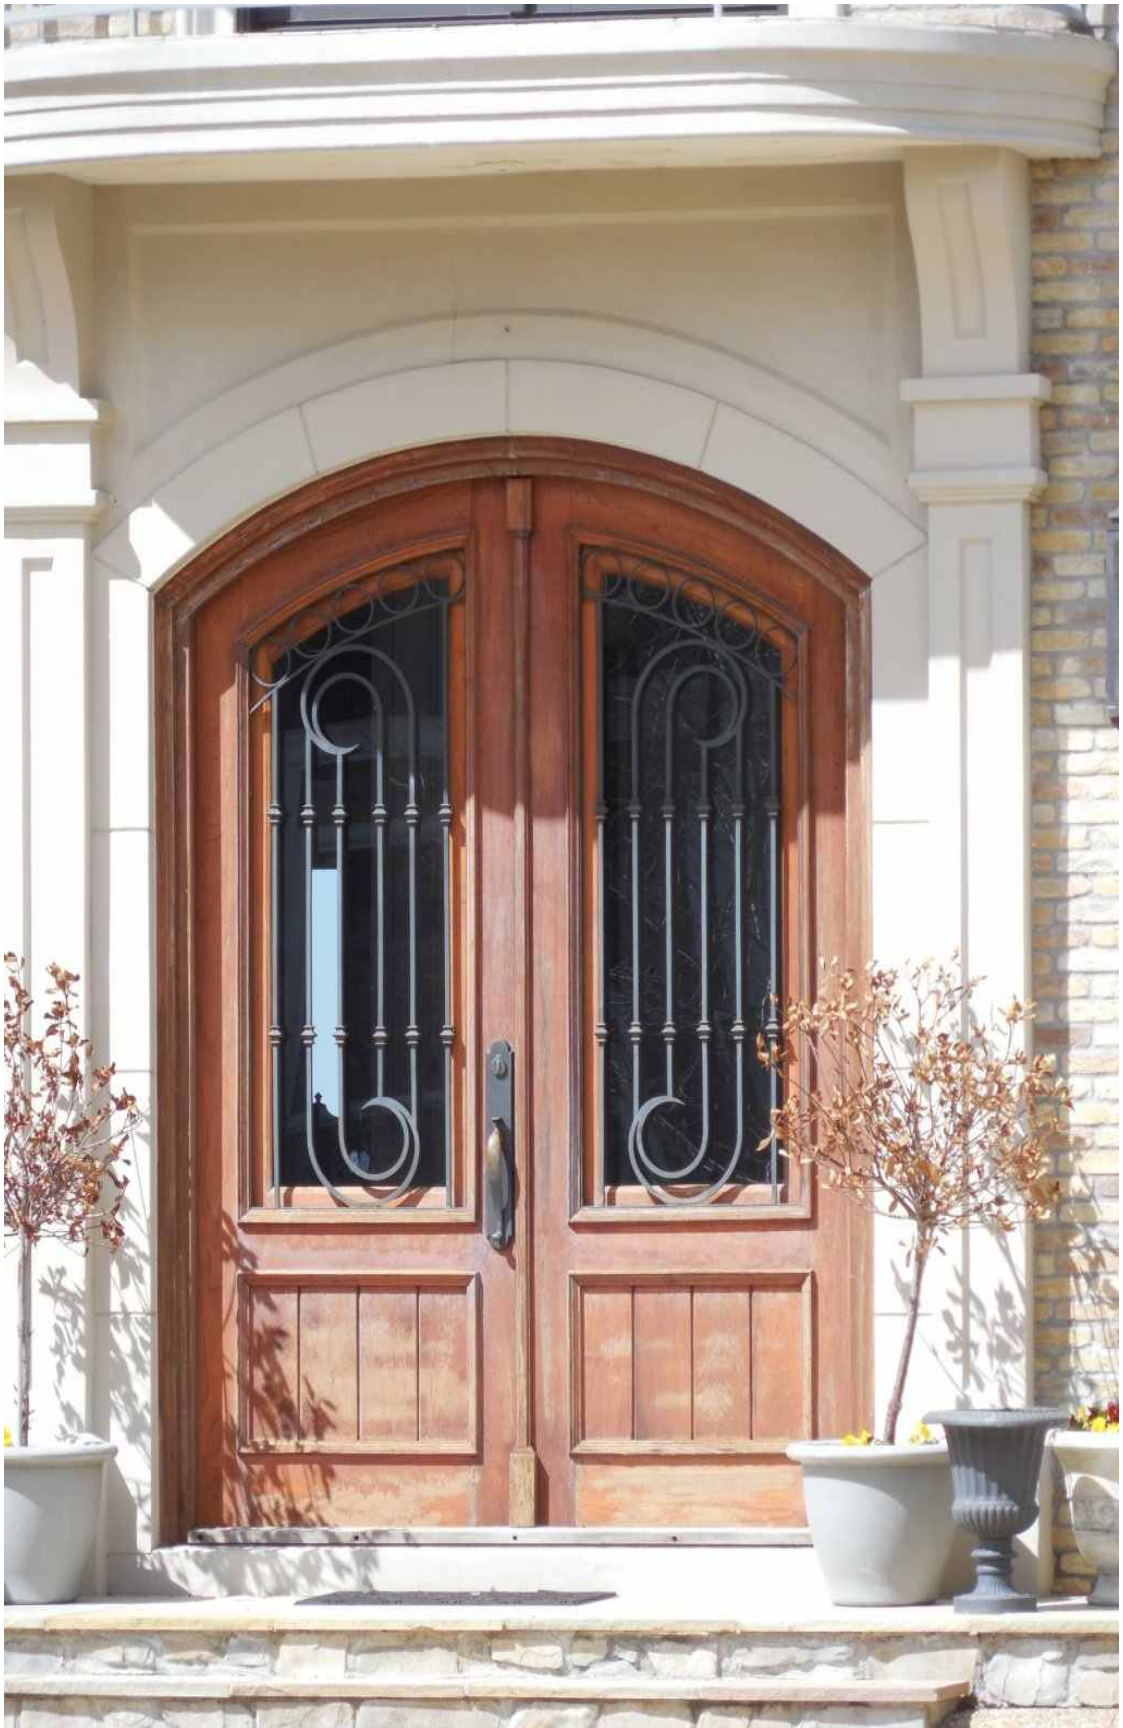

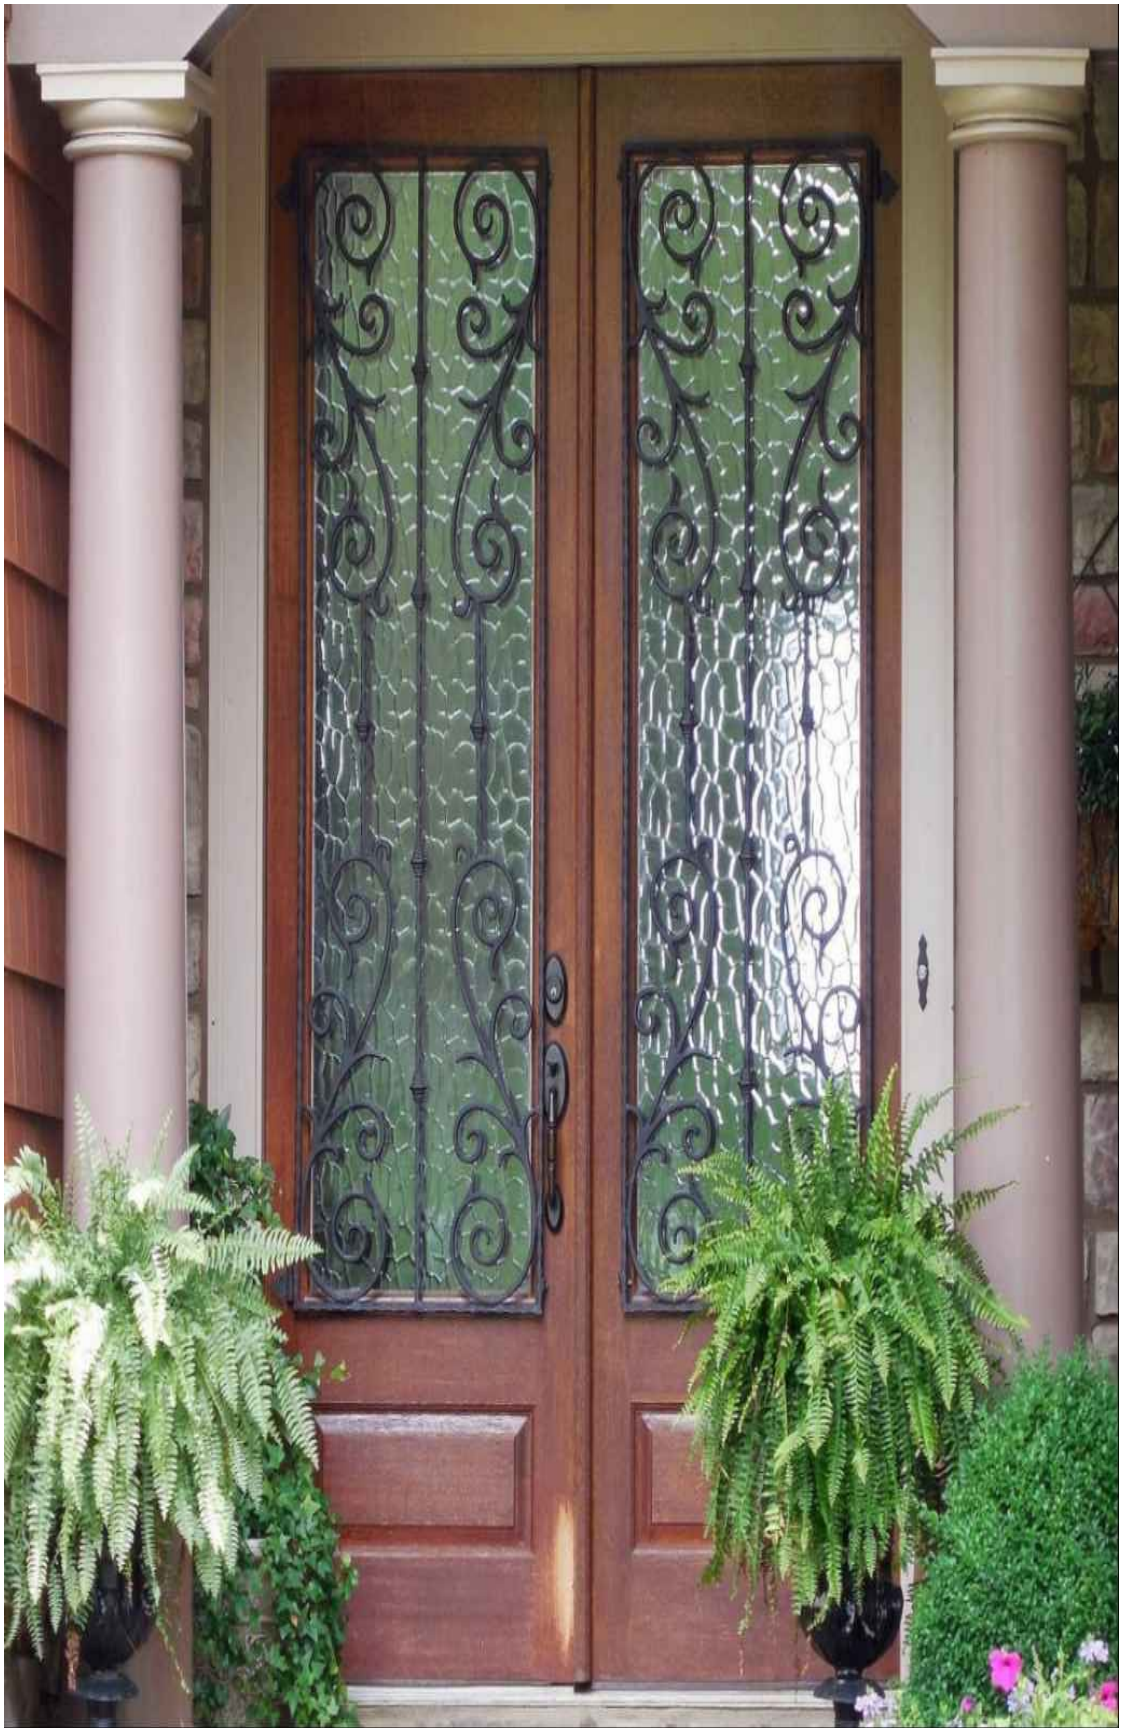

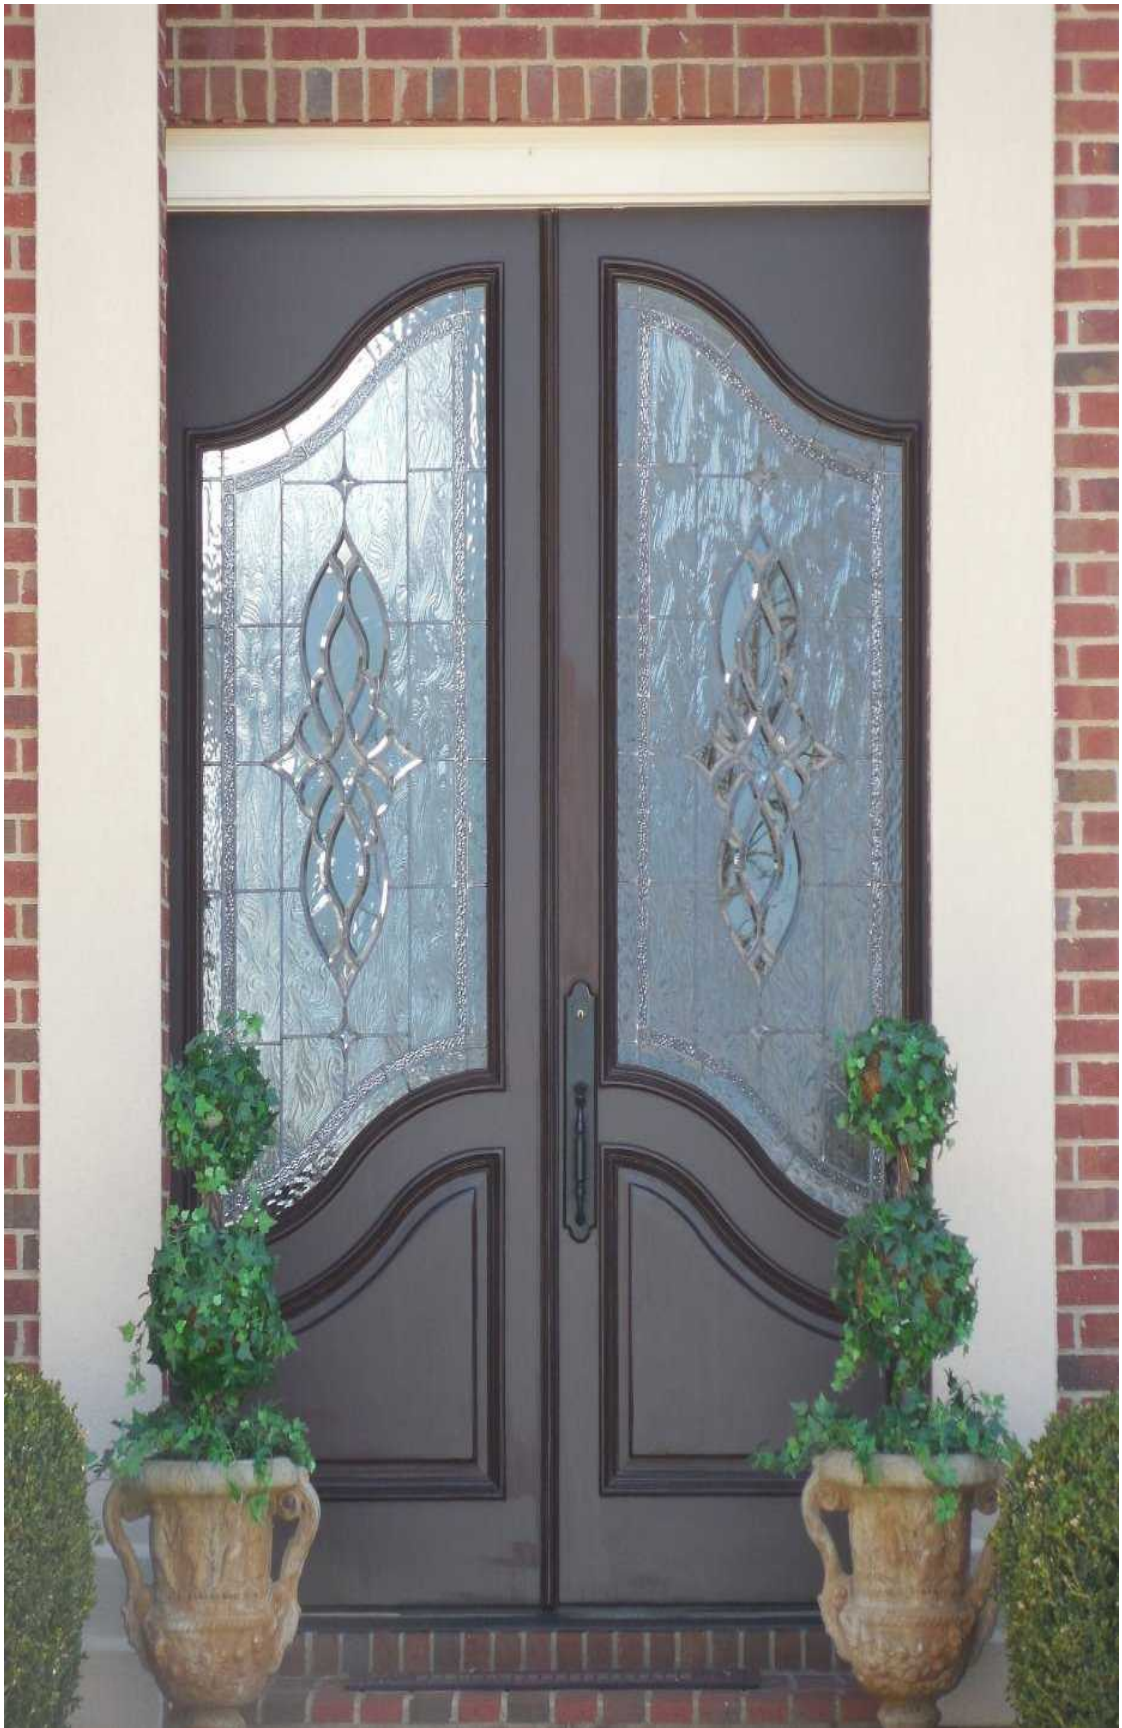

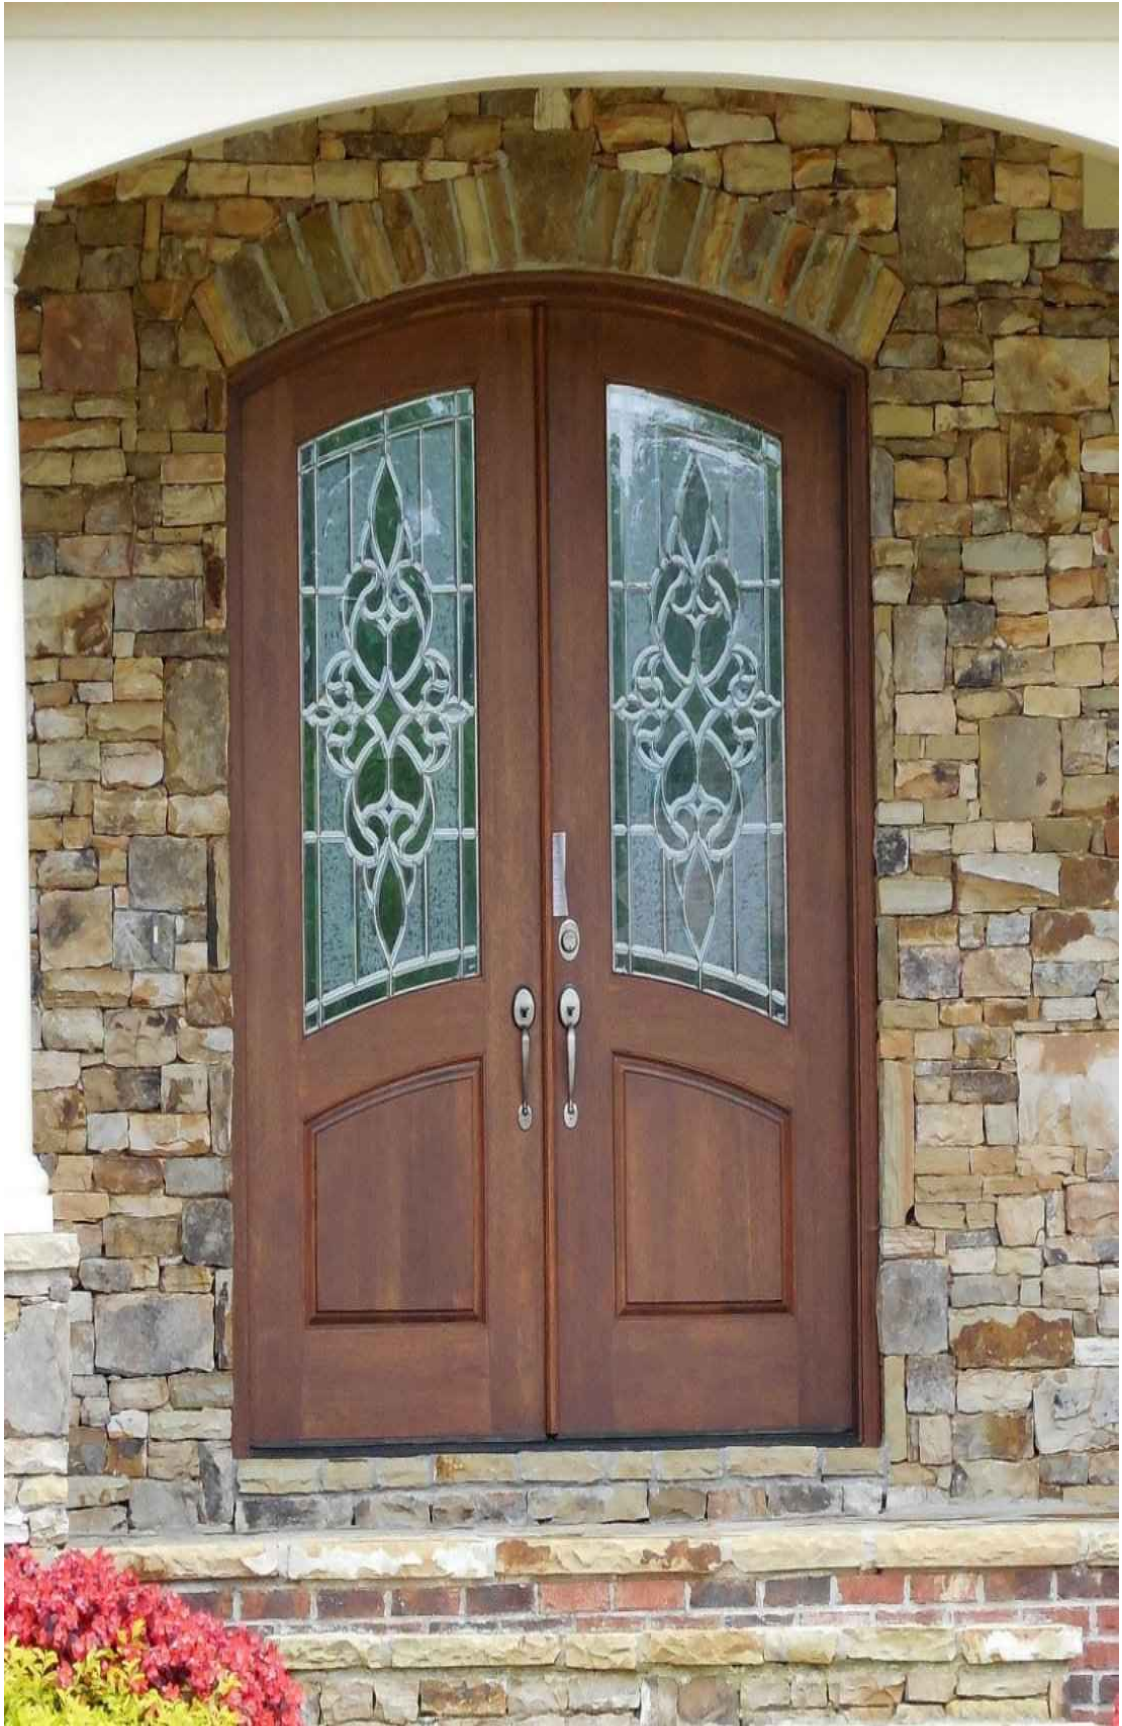

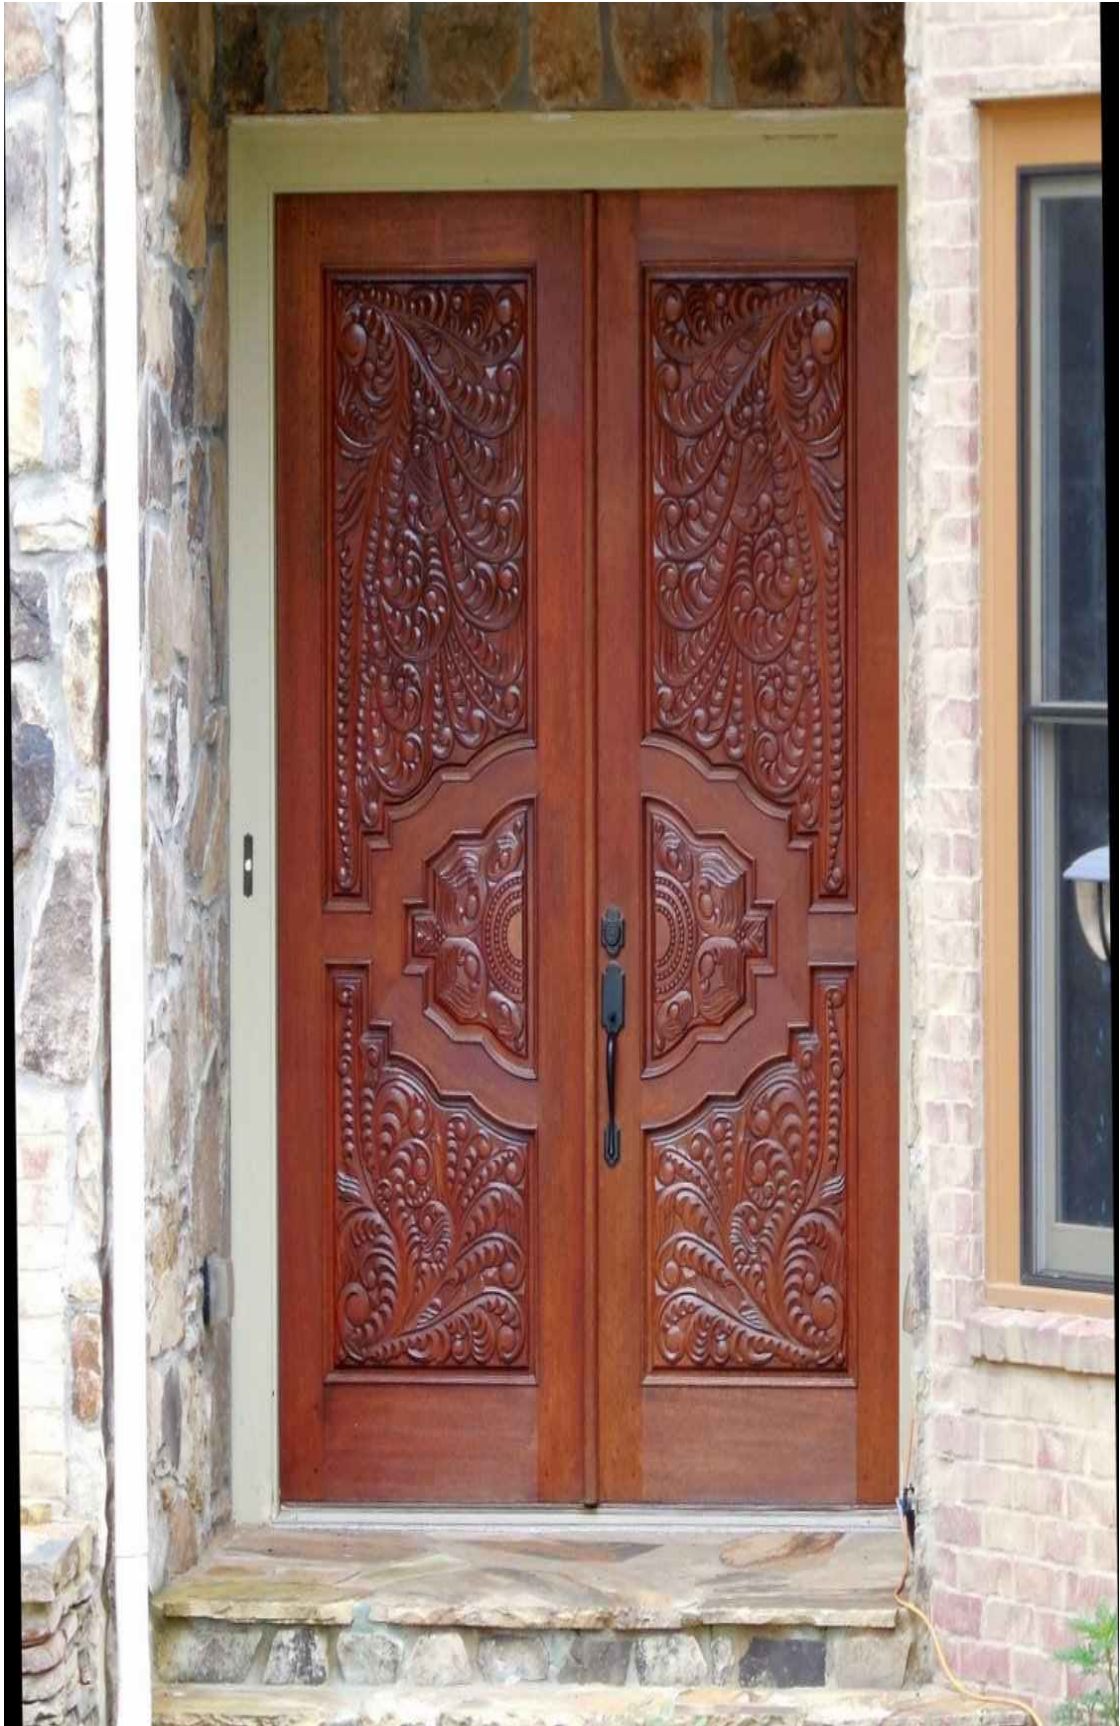

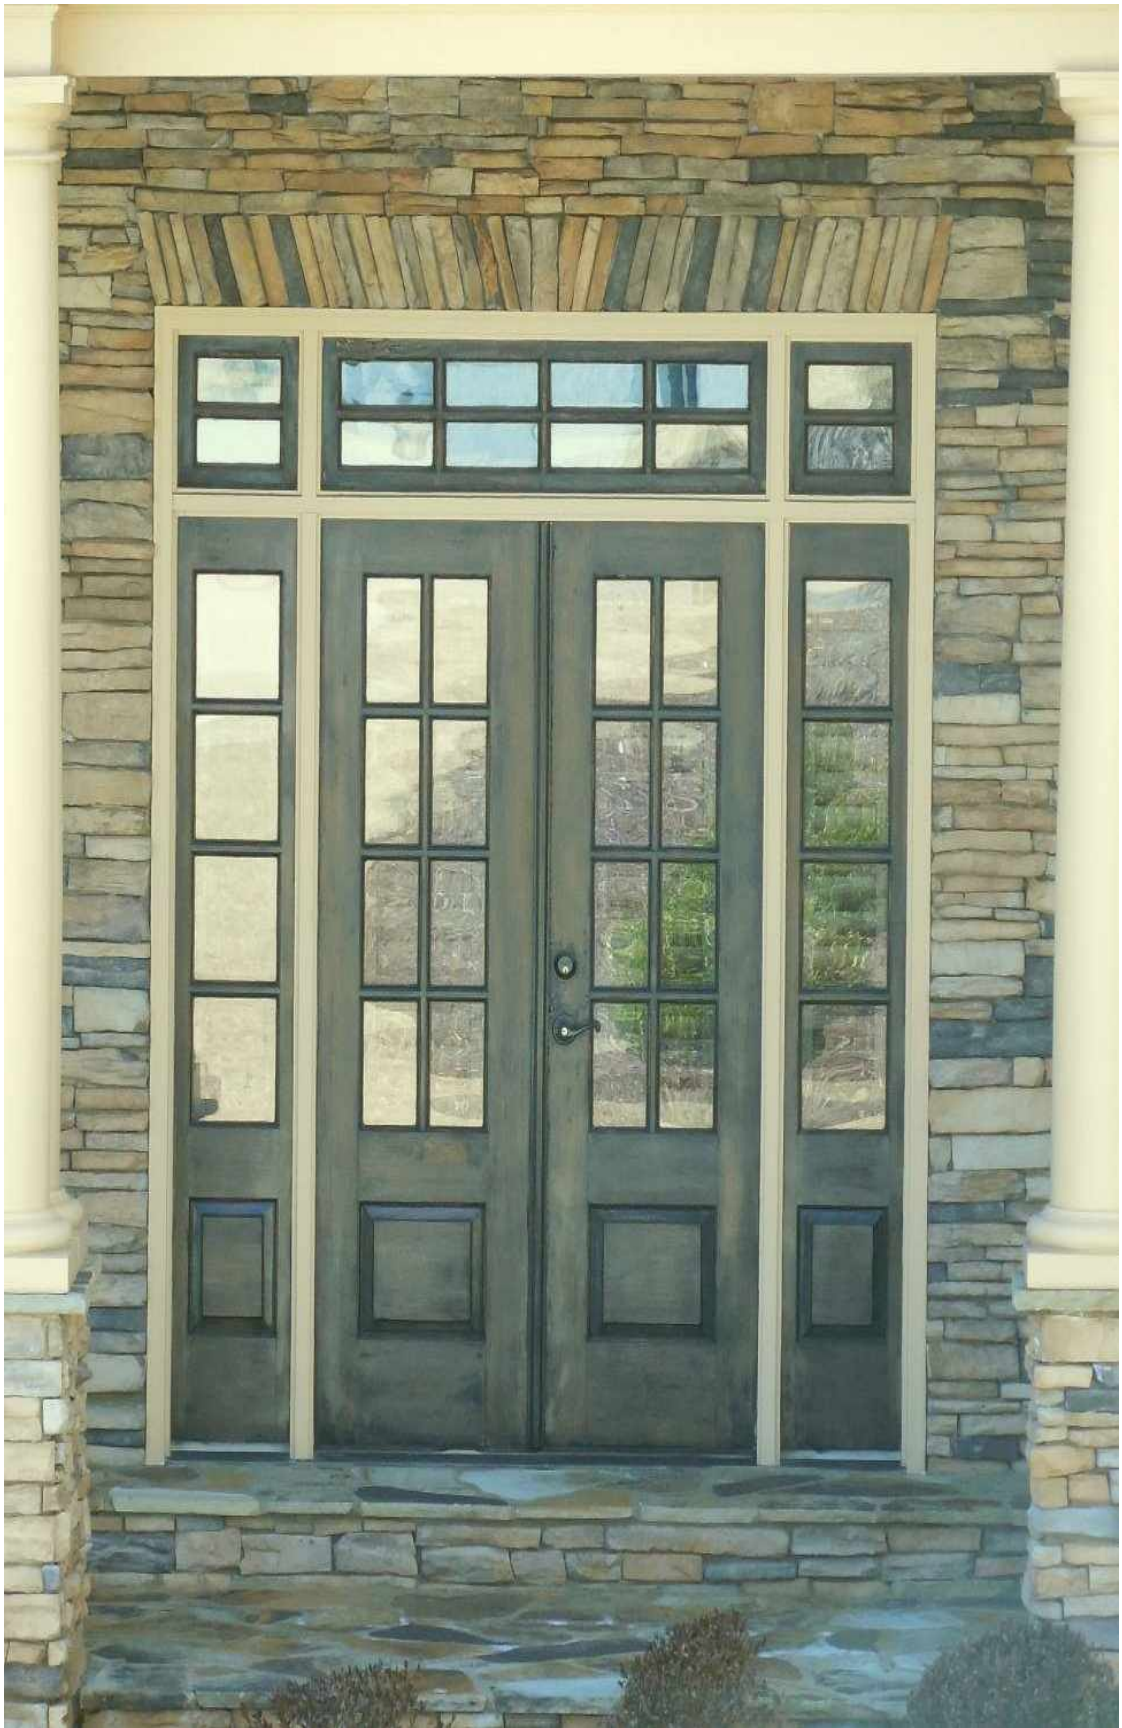

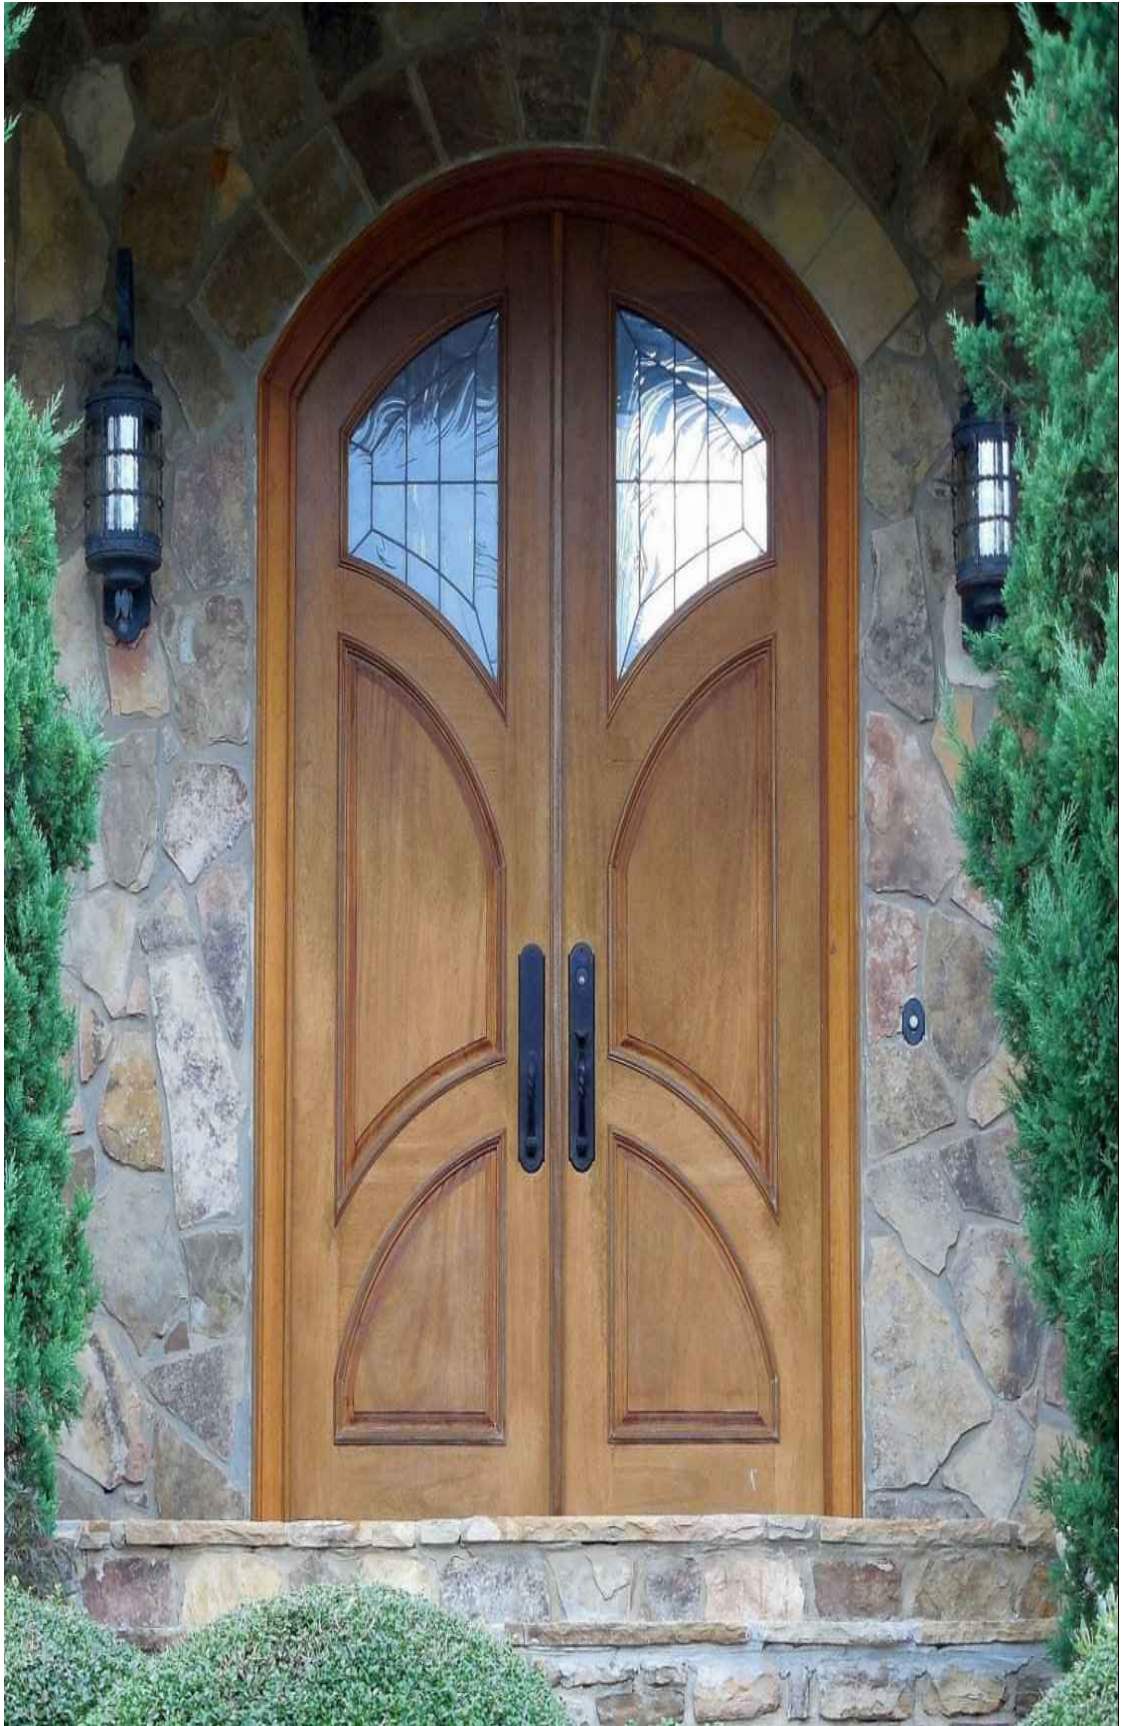

Thank You!
